## FCC Notice “Declaration of Conformity Information”

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ❖ Reorient or relocate the receiving antenna.
- ❖ Increase the separation between the equipment and receiver.
- ❖ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ❖ Consult the dealer or an experienced radio/TV technician for help.

---

### NOTE

Only Peripherals complying with the FCC Class B limits may be attached to this equipment. Operation with noncompliant peripherals or peripherals not recommended by Toshiba is likely to result in interference to radio and TV reception. Shielded cables must be used between the external devices and the computer's parallel port, monitor port, USB port, PS/2 port®, i.LINK® port and microphone jack. Changes or modifications made to this equipment not expressly approved by Toshiba or parties authorized by Toshiba could void the user's authority to operate the equipment.

---

---

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- ❖ This device may not cause harmful interference.
- ❖ This device must accept any interference received, including interference that may cause undesired operation.

## Industry Canada requirement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

## FCC requirements

The following information is pursuant to FCC CFR 47, Part 68 and refers to internal modems.

This equipment complies with Part 68 of the FCC rules. On the bottom of this equipment is a label that contains, among other information, the FCC registration number and ringer equivalence number (REN) for this equipment. If requested, the information must be provided to the telephone company.

The modem connects to the telephone line by means of a standard jack called the USOC RJ11C.

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC part 68 rules and requirements adopted by the ACTA. It is designed to be connected to a compatible modular jack that is also compliant.

The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. For products approved after July 23, 2001, the REN for this product is part of the product identifier that has the format

---

US:AAAEQ##TXXXX. The digits represented by the ## are the REN without a decimal point (e.g., 03 is a REN of 0.3). For earlier products, the REN is separately shown on the label.

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

## Telephone Company Procedures

The goal of the telephone company is to provide you with the best service it can. In order to do this, it may occasionally be necessary for them to make changes in their equipment, operations or procedures. If these changes might affect your service or the operation of your equipment, the telephone company will give you notice, in writing, to allow you to make any changes necessary to maintain uninterrupted service.

## If Problems Arise

If this equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advanced notice is not practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

If trouble is experienced with this equipment, for repair or limited warranty information, please contact Toshiba Corporation, Toshiba America Information Systems, Inc. or an authorized representative of Toshiba, or the Toshiba Support Centre within the United States at (800) 457-7777 or Outside the United States at (949) 859-4273. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.

## Disconnection

If you should ever decide to permanently disconnect your modem from its present line, please call the telephone company and let them know of this change.

## Fax Branding

The Telephone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device, including Fax machines, to send any message unless such message clearly contains in a margin at the top or bottom of each transmitted page or on the first page of the transmission, the date and time it is sent and an identification of the business or other entity, or other individual sending the message and the telephone number of the sending

---

machine or such business, other entity, or individual. (The telephone number provided may not be a 900 number or any other number for which charges exceed local or long-distance transmission charges.)

In order to program this information into your fax transmission, refer to the fax software instructions installed on this computer.

## Alarm Equipment

If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this equipment does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your telephone company or a qualified installer.

## Instructions for IC CS-03 Certified Equipment

- 1** NOTICE: The Industry Canada label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational and safety requirements as prescribed in the appropriate Terminal Equipment Technical Requirements document(s). The Department does not guarantee the equipment will operate to the user's satisfaction.

Before installing this equipment, users should ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. The customer should be aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be coordinated by a representative designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the telecommunications company cause to request the user to disconnect the equipment.

Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

Caution: Users should not attempt to make such connections themselves, but should contact the appropriate electric inspection authority, or electrician, as appropriate.

- 2** The user manual of analog equipment must contain the equipment's Ringer Equivalence Number (REN) and an explanation notice similar to the following:

---

The Ringer Equivalence Number (REN) of this device can be found on the label affixed to your computer.

NOTICE: The Ringer Equivalence Number (REN) assigned to each terminal device provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed 5.

- 3 The standard connecting arrangement (telephone jack type) for this equipment is jack type(s): USOC RJ11C.

## Wireless Interoperability

The TOSHIBA Wireless LAN Mini PCI Card products are designed to be interoperable with any wireless LAN product that is based on Direct Sequence Spread Spectrum (DSSS) radio technology, and is compliant to:

- ❖ The IEEE 802.11 Standard on Wireless LANs (Revision A/B/G), as defined and approved by the Institute of Electrical and Electronics Engineers.

## Wireless LAN and your Health

Wireless LAN products, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by Wireless LAN devices however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because Wireless LAN products operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Wireless LAN is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

In some situations or environments, the use of Wireless LAN may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the Wireless LAN equipment on board of airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the Wireless LAN device prior to turning on the equipment.

## Regulatory Information

The TOSHIBA Wireless LAN Mini PCI Card must be installed and used in strict accordance with the manufacturer's instructions as described in the user documentation that comes with the product. This device complies with the following radio frequency and safety standards.

## Canada – Industry Canada (IC)

This device complies with RSS 210 of Industry Canada.

---

**CAUTION**

The installer of this radio equipment must ensure that the antenna is located or pointed such that it does not emit RF field in excess of Health Canada limits for the general population; consult Safety Code 6, obtainable from Health Canada's Web site [www.hc-sc.gc.ca/rpb](http://www.hc-sc.gc.ca/rpb). The RF device shall not be co-located with any other transmitter that has not been tested with this device.

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l'utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

The term "IC" before the equipment certification number only signifies that the Industry Canada technical specifications were met.

To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) that is installed outdoors is subject to licensing.

Pour empêcher que cet appareil cause du brouillage au service faisant l'objet d'une licence, il doit être utilisé à l'intérieur et devrait être placé loin des fenêtres afin de fournir un écran de blindage maximal. Si le matériel (ou son antenne d'émission) est installé à l'extérieur, il doit faire l'objet d'une licence.

#### **CAUTION**

This device is restricted to indoor use due to its operation in the 5.15 GHz to 5.25 GHz frequency range. Industry Canada requires this product to be used indoors for frequency range 5.15 GHz to 5.25 GHz to reduce the potential for harmful interference to co-channel Mobile Satellite systems.

High power radars are allocated as primary users of the 5.25 GHz to 5.35 GHz and 5.65 GHz to 5.85 GHz bands. These radar stations can cause interference with and/or damage this device.

- ❖ To remain in conformance with European spectrum usage laws for Wireless LAN operation, the above 2.4 GHz and 5 GHz channel limitations apply. The user should use the wireless LAN utility to check the current channel of operation. If operation is occurring outside of the allowable frequencies as listed above, the user must cease operating the Wireless LAN at that location and consult the local technical support staff responsible for the wireless network.
- ❖ The 5 GHz Turbo mode feature is not allowed for operation in any European Community country.

- ❖ This device must not be operated in ad-hoc mode using channels in the 5 GHz bands in the European Community. Ad-hoc mode provides a direct communication between two client devices without a Wireless LAN Access Point.
- ❖ This device must be used with Access Points that have employed and activated a radar detection feature required for European Community operation in the 5 GHz bands. This device will operate under the control of the Access Point in order to avoid operating on a channel occupied by any radar system in the area. The presence of nearby radar operation may result in temporary interruption of operation of this device. The Access Point's radar detection feature will automatically restart operation on a channel free of radar. You may consult with the local technical support staff responsible for the wireless network to ensure the Access Point device(s) are properly configured for European Community operation.

## Bluetooth wireless technology Interoperability

Bluetooth™ Cards from TOSHIBA are designed to be interoperable with any product with Bluetooth wireless technology that is based on Frequency Hopping Spread Spectrum (FHSS) radio technology, and is compliant to:

- ❖ Bluetooth Specification as defined and approved by The Bluetooth Special Interest Group.
- ❖ Logo certification with Bluetooth wireless technology as defined by The Bluetooth Special interest Group.

**CAUTION**

Bluetooth wireless technology is a new innovative technology, and TOSHIBA has not confirmed compatibility of its Bluetooth™ products with all PCs and/or equipment using Bluetooth wireless technology other than TOSHIBA portable computers.

Always use Bluetooth™ cards from TOSHIBA in order to enable wireless networks over two or more (up to a total of seven) TOSHIBA portable computers using these cards. Please contact TOSHIBA PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

When you use Bluetooth™ cards from TOSHIBA close to 2.4 GHz Wireless LAN devices, Bluetooth transmissions might slow down or cause errors. If you detect certain interference while you use Bluetooth™ cards from TOSHIBA, always change the frequency, move your PC to the area outside of the interference range of 2.4 GHz Wireless LAN devices (40 meters/ 43.74 yards or more) or stop transmitting from your PC. Please contact TOSHIBA PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

Bluetooth™ and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use Bluetooth™ and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection. If you should experience any such problem, immediately turn off either one of your Bluetooth™ or Wireless LAN. Please contact Toshiba PC product support on Web site <http://www.toshiba-europe.com/computers/tnt/bluetooth.htm> in Europe or <http://www.pcsupport.global.toshiba.com> in the United States for more information.

## Bluetooth wireless technology and your Health

The products with Bluetooth wireless technology, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by devices with Bluetooth wireless technology however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because products with Bluetooth wireless technology operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Bluetooth wireless technology is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

---

In some situations or environments, the use of Bluetooth wireless technology may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- ❖ Using the equipment with Bluetooth wireless technology on board of airplanes, or
- ❖ In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the device with Bluetooth wireless technology prior to turning on the equipment.

# Chapter 1

## Getting Started

---

This chapter provides tips for working comfortably, describes how to connect components, and explains what to do the first time you use your computer.

### Selecting a place to work

Your computer is designed to be used in a variety of locations and situations. This section provides guidelines for setting up your computing environment.

### Creating a computer-friendly environment

Place the computer on a flat surface that is large enough for the computer and any other items you need to use, such as a printer. Leave enough space around the computer and other equipment to give adequate ventilation and prevent overheating.

---

To keep your computer in prime operating condition, protect your work area from:

- ❖ Dust, moisture, and direct sunlight.
- ❖ Equipment that generates a strong electromagnetic field, such as large stereo speakers (other than speakers that are connected to the computer) or speakerphones.
- ❖ Rapid changes in temperature or humidity and sources of temperature change such as air conditioner vents or heaters.
- ❖ Extreme heat, cold, or humidity.
- ❖ Liquids and corrosive chemicals.

---

**⚠ CAUTION**

If you spill liquid into the computer, turn off the computer, unplug it from the AC power source, and let it dry out completely before turning it on again. If the computer does not operate correctly after you turn it back on, contact your network administrator. Refer to [“If you need further assistance” on page 215](#) for more information.

---

## Keeping yourself comfortable

Strain and stress injuries are becoming more common as people spend more time using their computers. However, with a little care and the proper use of the equipment, you can work comfortably throughout the day.

---

**⚠ WARNING**

Using the computer keyboard incorrectly can result in discomfort and possible injury. If your hands, wrists, and/or arms hurt while typing, stop using the computer and rest. If the discomfort persists, consult a physician.

---

This section provides hints on avoiding strain and stress injuries. For more information, consult books on ergonomics, repetitive-motion injury, and repetitive-stress syndrome.

## **Placement of the computer**

Proper placement of the computer and external devices is important to avoid stress-related injuries. Consider the following when placing your computer.

- ❖ Place the computer on a flat surface at a comfortable height and distance. You should be able to type without twisting your torso or neck and look at the screen without slouching.
- ❖ If you use an external monitor, the top of the screen should be no higher than eye level.
- ❖ If you use a paper holder, set it at the same height and distance as the screen.

## **Seating and posture**

When using your computer, maintain good posture with your body relaxed and your weight distributed evenly. Proper seating is a primary factor in reducing work strain. Some people find a backless chair more comfortable than a conventional chair. Whichever type you choose, use the following guidelines to adjust your chair for maximum computing comfort.

### *Correct posture and positioning of the computer*

- ❖ Position your chair so that the keyboard is at or slightly below the level of your elbow. You should be able to type comfortably with your shoulders relaxed and your forearms parallel to the floor.

If you are using a conventional chair:

- ❖ Your knees should be slightly higher than your hips. If necessary, use a footrest to raise the level of your knees and ease the pressure on the back of your thighs.
- ❖ Adjust the back of your chair so that it supports the lower curve of your spine. If necessary, use a cushion to provide extra back support. Lower-back support cushions are available at many office supply stores.
- ❖ Sit with your back straight so that your knees, hips, and elbows form approximately 90-degree angles when you work. Do not slump forward or lean back too far.

## Lighting

Proper lighting can improve the readability of the display and reduce eyestrain.

- ❖ Position the display panel or external monitor so that sunlight or bright indoor lighting does not reflect off the screen. Use tinted windows or shades to reduce glare.

- ❖ Avoid placing your computer in front of a bright light that shines directly into your eyes.
  - ❖ If possible, use soft, indirect lighting in your computer work area.
- 

**⚠ CAUTION**

Your LCD display has a brightness approaching that of a TV device. We recommend that you adjust the brightness of your LCD to a comfortable level to prevent possible strain on your eyes.

---

## Arms and wrists

- ❖ Avoid bending, arching, or twisting your wrists. Keep them in a relaxed, neutral position while typing.
- ❖ Exercise your hands, wrists, and arms to improve circulation.

## Work habits

The key to avoiding discomfort or injury from strain is to vary your activities. If possible, schedule a variety of tasks into your working day. Finding ways to break up the routine can reduce stress and improve your efficiency.

- ❖ Take frequent, short breaks to change position, stretch your muscles, and relieve your eyes. A break of two or three minutes every half hour is more effective than a long break after several hours.
- ❖ Avoid performing repetitive activities for long periods. Intersperse such activities with other tasks.
- ❖ Focusing your eyes on your computer screen for long periods can cause eyestrain. Look away from the

---

computer frequently and focus your eyes on a distant object for at least 30 seconds.

---

**⚠ CAUTION** Your LCD display has a brightness approaching that of a TV device. We recommend that you adjust the brightness of your LCD to a comfortable level to prevent possible strain on your eyes.

---

## Other precautions

Your computer is designed to optimize safety, minimize strain, and withstand the rigors of portability. However, you should observe certain precautions to further reduce the risk of personal injury or damage to the computer.

---

**⚠ CAUTION** Some PC Cards can become hot with prolonged use. If two cards are installed, both can become hot even if only one is used extensively. Overheating of a PC Card can result in errors or instability in the PC Card operation.

Be careful when you remove a PC Card that has been used for lengthy periods of time.

---

---

**⚠ CAUTION** Do not apply heavy pressure to the computer or subject it to sharp impacts. Excessive pressure or impact can damage computer components or cause your computer to malfunction.

---

---

## Setting up your computer

---

TECHNICAL NOTE: You must complete all set-up steps up to [“Setting up your software” on page 53](#) before adding external or internal components to your computer. These components include, but are not limited to, a mouse, keyboard, printer, memory, and PC cards.

---

Your computer comes with a rechargeable battery pack that must be charged before you can use it.

To use external power or to charge the battery, you must attach the AC adapter. See [“Connecting the AC adapter” on page 47](#).

To register your computer online, or to sign up for an Internet account, you must connect the built-in modem to a telephone line.

Before adding any of these devices to the computer, be sure to complete [“Setting up your software” on page 53](#).

After setting up your computer, you may want to:

- ❖ Add more memory. See [“Adding memory” on page 66](#).
- ❖ Connect a mouse. See [“Connecting a mouse” on page 61](#).
- ❖ Connect a full-size keyboard. See [“Using a keyboard” on page 60](#).
- ❖ Connect an external monitor. See [“Using external display devices” on page 57](#).
- ❖ Connect a local printer. See [“Connecting a local printer” on page 61](#).
- ❖ Install PC Cards. See [“Inserting and removing PC Cards” on page 81](#).

For more information on installing specific devices, see [“Connecting Other External Devices” on page 57](#).

---

## Connecting the AC adapter

our computer requires power to operate. Use the power cord/cable and AC adapter cord to connect the computer to a live electrical outlet, or to charge the computer's battery.

### *Sample power cord/cable and AC adapter*

---

**⚠ WARNING**

Hold the power cord/cable by its plug when you connect/disconnect it. Do NOT pull the cord/cable itself. Doing so may damage the power cord/cable and result in a short circuit or electric shock.

---

---

**⚠ WARNING**

When you connect the AC adapter to the computer, always follow the steps in the exact order as described in the User's Manual. Connecting the power cord/cable to a live electrical outlet should be the last step; otherwise, the adapter DC output plug could hold an electrical charge and cause an electrical shock or minor bodily injury when touched. As a general safety precaution, avoid touching any metal parts.

---

**⚠ CAUTION**

Use only the AC adapter supplied with your computer or an equivalent adapter that is compatible. Use of any incompatible adapter could damage your computer. Toshiba assumes no liability for any damage caused by use of an incompatible adapter.

To connect AC power to the computer:

- 1 Connect the power cord/cable to the AC adapter.

*Sample connecting the power cord/cable to the AC adapter cord*

**⚠ WARNING**

Handling the cord on this product will expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm. ***Wash hands after handling.***

- 2 Plug the AC adapter cord into the DC-IN on the back of the computer.

### *Sample connecting the AC adapter cord to the computer*

- 3 Connect the power cord/cable to a live electrical outlet.

The AC power indicator glows when the computer is connected to an external power source.

The battery light:

- ❖ Glows amber while the battery is being charged.
- ❖ Glows green when the battery is fully charged.
- ❖ Is unlit when the computer is not connected to an external power source. For information on determining battery power, see [“Monitoring battery power” on page 125](#).

#### **⚠ WARNING**

Damaged power cords/cables can cause fire or electric shock. Never modify, forcibly bend, place heavy objects on top of, or apply heat to the power cord/cable.

If the power cord/cable becomes damaged or the plug overheats, discontinue use. There is a risk of electric shock.

Never remove the power plug from the outlet with wet hands. Doing so may cause an electric shock.

---

## Charging the battery

Before you can use the battery to power the computer, you must charge it. Connect the computer to a live electrical outlet using the AC adapter and power cable. When the AC adapter is connected to a live electrical outlet, the system indicator panel's AC power light (■) glows green and the battery light (□) glows amber. When the battery light turns green, the battery is completely charged and ready to power the computer.

Charging time for the battery varies depending upon the demand placed on the AC adapter. If the computer is off, the battery should fully charge in about three hours. If the computer is on, the battery will charge in four to ten hours, provided the computer is *not* consuming full power. If you are also charging a secondary battery housed in the Slim SelectBay®, charging time will be longer.

---

### NOTE

Once the battery is charged for the first time, avoid leaving the computer plugged in and turned off for more than a few hours at a time.

---

---

### NOTE

Battery life and charge time may vary depending on the applications, power management settings, and features used.

---

**TECHNICAL NOTE:** When your computer is using all of the power provided by the AC Adaptor to run applications, features, and devices, the recharging of the battery can not occur. Your computer's Power Saver utility can be used to select a power level setting that reduces the power required for system operation and will allow the battery to recharge.

---

---

For more information on battery use, see [“Running the computer on battery power”](#) on page 122.

## Turning on the computer

The computer is now ready for you to turn it on and begin using it.

### Opening the display panel

- 1 Slide the display latch to the right.
- 2 Lift the display panel.

---

**CAUTION**

To avoid damaging the display panel, do not force it beyond the point where it moves easily, and never lift the computer by the display panel.

---

Small bright dots may appear on your TFT display when you turn on your computer. Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology.

---

**NOTE**

Over a period of time, and depending on the usage of the computer, the brightness of the LCD Screen will deteriorate. This is an intrinsic characteristic of LCD technology.

Screen will dim when the computer is operated on battery power and you may not be able to increase the brightness of the screen.

---

---

## Turning on the power

To turn on the computer:

- 1 Make sure any external devices (such as the AC adapter, if you plan to use AC power rather than battery power) are properly connected and ready.
- 2 Check to ensure that any diskette drives are empty.
- 3 Press and hold the power button in until the on/off light on the system indicator panel glows green—about one second.

### *Sample turning on the power*

The preinstalled operating system will load automatically.

---

**CAUTION**

When you turn on the computer for the first time, do not turn off the power again until the operating system has loaded completely.

---

**NOTE**

The name of windows displayed, and the order in which windows appear, may vary according to your software setup choices.

---

The first time you turn on your computer, the Setup Wizard guides you through steps to set up your software.

- 1** From the welcome screen, click **Next** to enter the Setup Wizard.
- 2** Confirm acceptance of Microsoft's End User License Agreement and click **Next**.
- 3** Enter the computer name and description and click **Next** or **Skip**.

The computer pauses for a moment while checking for an internet connection.

A window displays the message "An Internet connection could not be chosen."

- 4** Click **Skip** to exit the process or **Next** to continue.
- 

**NOTE**

To register online, your computer's modem must be connected to a voice-grade telephone line, or the Internet via a Local Area Network.

---

A window will display asking if you wish to register with Toshiba and Microsoft.

- 5** Click **Yes** to register or **No** to exit the process.

**NOTE**

If you click No, you may register with Toshiba by clicking the Register with Toshiba icon on the desktop.

---

- 6 Enter your personal information in the registration window.
- 7 Click **Finish** to complete the process.  
Your computer restarts automatically.

## Registering your computer with Toshiba

Product registration is strongly recommended, and allows Toshiba to send Customer periodic updates, announcements, and special offers applicable to the product. Product registration can be completed during the initial start up process of your computer. If you opt not to register at that time, you can either double-click the icon on your desktop or go to the Toshiba Web site at [www.register.toshiba.com](http://www.register.toshiba.com). Customer failure to complete Product Registration will not diminish Customer rights under this limited Warranty.

## Setting up other devices

You may want to take this time to set up your printer or other peripheral devices. For more information, see “[Connecting a local printer](#)” on page 61.

## Turning off the computer

It is generally a good idea to turn off your computer when you are not using it.

If you are using the computer for the first time, leave the computer plugged into a power source (even though the

---

computer is off) to fully charge the main battery. With the computer off, it may take up to three hours to recharge the main battery.

When you power down the computer, you have three options to choose from: Turn Off (or Shut down), Hibernate, and Standby. Each option has its advantages.

- ❖ Use the Shut down command if you are using the Windows XP Professional operating system and connected to a domain server.
- ❖ If you have work in progress and are not connected to a network, use the Windows® Standby or Hibernate commands to save your system settings to memory so that, when you turn on the computer again, you will automatically return to where you left off.
- ❖ Use the Turn Off command if you are using the Windows® XP Professional operating system when not connected to a domain server.

---

**CAUTION**

Never turn off the computer while any drive is in use. Doing so may damage the media in use and result in loss of data.

---

## Closing the display panel

When you are finished, shut the computer down and close the display panel to keep dust and dirt out of the computer.

If you close the computer while it is still on, these actions will occur:

- ❖ If you have the LCD power-saver feature set, the LCD panel will automatically turn off until you open it again.
- ❖ If you have the audible warning set, the computer will beep to notify you that it is still on.

- ❖ If you have an action feature set, the computer will perform either: Nothing, Standby, or Hibernate (see [“Using Hibernation” on page 115](#)).

# Chapter 2

## Connecting Other External Devices

---

This chapter describes how to connect devices that can increase the capabilities of your computer.

### Using external display devices

Your computer comes with a built-in LCD display, but you can also connect an external monitor or projector via the RGB (monitor) port.

Connect the monitor or projector to your computer and then configure your computer for the type of device you are connecting. The following section describes how to do this in detail. Also, refer to the documentation for your operating system and devices.

### Connecting an external monitor or projector

You can easily attach an external monitor or projector to your computer if you need a larger screen. To do this:

- 1 Connect the monitor's video cable to the RGB port on the back of the computer.

- 
- 2 Connect the device's power cable to a live electrical outlet.
  - 3 Turn on the external device.
  - 4 Set the display mode by pressing Fn + F5 or by setting the Display Properties settings. For more information, see [“Directing the display output when you turn on the computer”](#) below.

## Directing the display output when you turn on the computer

Once you've connected an external display device, you can choose to use the internal display only, the external device only, or both simultaneously. The quickest way to change the display output settings is to use the display hot key (Fn + F5):

- 1 Press Fn and F5 simultaneously.
- 2 While holding down Fn, press F5 repeatedly until the setting you want takes effect.

This hot key cycles through the settings in the following order:

- ❖ Built-in display only
  - ❖ Built-in display and external device simultaneously
  - ❖ External device only
- 3 Release the Fn key.

**TECHNICAL NOTE:** You can also change these settings using the Display Properties Box.

Set the option for the video controller by clicking Start, then Control Panel and clicking Display. Choose the Settings tab, click the Advanced button, select Display Device, select the applicable Monitor type, click Apply or OK.

---

---

For more information on switching the display output, see [“Display modes” on page 225](#).

## Adjusting the quality of the external display

To obtain the best picture quality from your external monitor or projector, you may need to adjust the video settings. See the video device documentation for additional configuration steps.

**TECHNICAL NOTE:** In order to use the simultaneous mode, you must set the resolution of the internal display panel to match the resolution of the external display device. The external display device must support a resolution of 640 x 480 or higher.

---

## Video limitations

Keep in mind that the quality of the display will be limited to the capabilities of the external video device.

- ❖ If the external video device, such as an SVGA monitor, is capable of displaying at a maximum resolution of 640 x 480 and your system is set for a higher resolution, only part of the desktop will appear on the screen. You can scroll to view the “lost” area.
- ❖ Since most video projectors overscan by 15 to 20 percent, some of the desktop will be outside the viewing area. You can scroll to view the edge of the desktop.
- ❖ If you use the display hot key (Fn + F5) to change the display output with the LCD Display Stretch option enabled and the display area (resolution) set to 640 x 480 or 800 x 600, the image on the internal display panel may appear stretched.

## Using a keyboard

If you prefer to use a full-size keyboard, you can attach a USB keyboard to a USB port, or a serial keyboard to an optional Advanced Port Replicator III. See your Toshiba sales representative for more information.

### Connecting a keyboard

To connect a USB keyboard, gently push the keyboard cable into the USB port. To connect a serial keyboard, gently push the keyboard cable into the serial port of an optional Advanced Port Replicator III.

### Making your external keyboard emulate the Fn key

An external keyboard does not have the Fn key provided by the computer's built-in keyboard. You can use the Fn Key Emulation option in Toshiba Hardware Setup to assign an external keyboard key combination that will emulate the internal keyboard's Fn key.

In Toshiba Hardware Setup, you can emulate the Fn keys by setting key combinations in the keyboard option of the utility. See [“TOSHIBA HW Setup” on page 161](#) for more information.

---

**NOTE**

The Fn emulation key is not supported when using a USB keyboard.

---

## Using a mouse

If you prefer to use a standard mouse, you can attach a USB mouse to a USB port or a serial mouse to an optional Advanced Port Replicator III. See your Toshiba sales representative for more information.

---

## Connecting a mouse

To connect a USB mouse, gently push the keyboard cable into the USB port. To connect a serial mouse, gently push the mouse cable into the serial port of an optional Advanced Port Replicator III.

---

## Connecting a local printer

**CAUTION**

Your printer documentation may require you to install the printer software before physically connecting the printer to your computer. If you do not install the software as instructed by the printer manufacturer, the printer may not function correctly.

---

**CAUTION**

Never connect the printer cable while the computer's power is on. Doing so may damage the printer, the computer, or both.

---

**NOTE**

Read the documentation that came with your printer. Follow the manufacturer's instructions when connecting a local printer.

---

**NOTE**

You must supply the proper printer cable. If one did not come with your printer, you may purchase one from an electronics or computer store.

If your printer is ECP- or IEEE-compliant, make sure your printer cable is an IEEE 1284 cable.

---

## Connecting a parallel printer

These instructions assume you have a parallel printer.

To connect the printer:

- 1 If the computer is on, turn it off.
- 2 Connect the printer cable to the printer and to the computer's parallel port. Use the printer cable illustration as a connection guide.

### *Identifying the ends of a parallel printer cable*

- 3 Plug the printer's power cable into a live electrical outlet.
- 4 See your printer documentation for additional configuration steps.

For more information on getting your printer to print, see [“Printing your work” on page 101](#).

These instructions assume you have a USB printer, consult the document that came with your printer to verify the connection type.

## Connecting a USB printer

To connect the printer:

- 1 If the computer is on, turn it off.
- 2 Connect the printer cable to the printer and then connect the other end to one of the computer's USB ports.
- 3 Plug the printer's power cable into a live electrical outlet.
- 4 See your printer documentation for additional configuration steps or see “Setting up a printer,” below.

For more information on getting your printer to print, see [“Printing your work” on page 88](#).

## Connecting an optional external diskette drive

Some operations, such as creating a password service diskette, require a diskette drive designed for use with 3.5-inch diskettes.

*Sample optional external USB diskette drive*

To connect an optional external USB diskette drive, connect the cable to one of the USB ports.

*Connecting an optional external USB diskette drive*

## Connecting external speakers or headphones

**⚠ WARNING**

Before using headphones to listen to an audio CD, turn the volume dial down. Playing the CD with the volume set too high could damage your ears.

To attach an external stereo output device (headphone or external speakers):

- 1 Locate the headphone jack on the right side of the computer.
  - 2 Using any necessary adapters, plug the cable from the external audio device into the headphone jack. The headphone jack requires a 3.5 mm, 16-ohm stereo jack.
- When the headphone is inserted, the internal speakers are automatically disabled.

---

For more information on using headphones or external speakers, see “[Using external speakers or headphones](#)” on [page 142](#).

## Connecting an external microphone

Your computer comes equipped with an external microphone port. To use this feature, you must purchase an optional external microphone:

- 1 Locate the microphone jack on the right side of the computer.
- 2 Plug the microphone cord into the microphone jack.
- 3 Turn on the microphone.

For more information, see “[Recording sounds](#)” on [page 143](#).

## Using an expansion device

The expansion port is used to connect your computer to an expansion device. This is an excellent investment if you are using your computer both in and out of the office.

When you return to your desk, you can then connect to your network, print reports from your computer, or use a mouse instead of the touchpad. Connecting cables for each of these devices every time you return to the office is time-consuming and inconvenient.

With an expansion device, you can leave external devices connected while you are using your computer away from your desk. When you return, you can quickly connect your computer and have immediate access to all the devices.

For more information, see the accessories information package that comes with the device or visit [accessories.toshiba.com](http://accessories.toshiba.com).

---

## Adding memory

---

HINT: To purchase additional memory modules, see the accessories information packaged with your system or visit [accessories.toshiba.com](http://accessories.toshiba.com).

---

Your notebook computer is equipped with two memory slots which can provide various memory configurations. When additional memory is added, or original memory replaced, it is recommended that you use only compatible memory. In the event original memory is replaced with invalid memory, the system will beep and will not boot beyond the BIOS memory check. A message may display. If this occurs, contact Toshiba's support center at (800) 457-7777.

## Installing memory modules

Additional memory modules can be installed in your computer. There are two memory expansion slots; the secondary slot located on the bottom of your computer, and the primary slot located under your computer's keyboard. Normally, you will install or replace a memory module in the secondary slot—the secondary slot is designed for quick installation.

---

**CAUTION**

To avoid damaging the computer's screws, use a standard Phillips no.0 screwdriver (for primary memory installation) or Phillips no.1 screwdriver (for secondary memory installation) that is in good condition.

---

**NOTE**

If you install any memory module in your computer, be sure that a memory module resides in the primary slot. The computer does not boot when the primary slot is vacant. Toshiba recommends installing a memory module in the secondary slot prior to removing and installing a memory module in the primary slot, due to the ease of installation.

**NOTE**

Primary memory module installation requires significant computer disassembly and reassembly. If you are uncomfortable with this, please contact your Toshiba sales representative for a service professional to complete this procedure.

## Installing a memory module in the secondary slot

If the computer is on, begin at [step 1](#); otherwise, skip to [step 2](#).

- 1 Save your work, then shut down your computer completely using the Shut down or Turn Off command.

See [“Turning off the computer”](#) on page 54.

- 2 Unplug the computer.

**CAUTION**

Installing a memory module with the computer's power on may damage the computer, the memory module, or both.

- 3 Close the display panel and remove any cables you may have connected.
- 4 Turn the computer upside down.
- 5 If the battery lock is in the locked position, slide it to the unlocked position.

- 6 Slide the battery release latch to release the battery.

*Locating the sample memory module cover*

- 7 Using a standard Phillips no. 1 screwdriver, unscrew the screw that secures the memory module cover, then remove the memory module cover. Place the screw and the cover in a safe place so that you can retrieve them later.

*Removing the sample memory module cover*

- 8 If a memory module exists in the slot, remove it as detailed in [“Removing a memory module from the secondary slot” on page 70](#). If no memory module exists in the slot, proceed to [step 9](#).

**CAUTION**

Static electricity can damage the memory module. Before you handle the module, touch a grounded metal surface to discharge any static electricity you may have built up.

To avoid damaging the memory module, be careful not to touch its pin connector on the side you insert into the computer.

- 9 Remove the new memory module from its antistatic packaging.
- 10 Holding the memory module at an angle by its edges so that the gold connector bar faces the slot, fit the module into the socket.
- 11 Gently press down on the memory module until the clips snap into place.

Do not force the module into position. The memory module should be level when secured in place.

*Inserting the sample memory module into the secondary slot*

**CAUTION**

Avoid touching the connectors on the memory module or on the computer. Grease or dust on the connectors may cause memory access problems.

- 12 Replace the cover slot and the screw.

- 13 Turn the computer over and restart it.

When you turn on the computer, it automatically recognizes the additional memory.

## Removing a memory module from the secondary slot

If you need to remove a secondary memory module:

- 1 Complete steps 1–7 in “[Installing a memory module in the secondary slot](#)” to shut down the computer and remove the memory module cover.

---

**CAUTION**

Do not try to remove a memory module with the computer turned on. You can damage the computer and the device.

Do not remove the memory module while the computer is in Standby mode. The computer could hang up the next time you turn it on and data in memory will be lost. In either of the above cases, the Standby configuration will not be saved.

The following message appears when you turn on the power:

Warning: Resume Failure  
Press Any Key To Continue

If the computer hangs up when you turn it on, perform the following: Press the power button and hold it down for five seconds, then turn the power on again.

---

- 2 Pull the clips away from the memory module.  
The memory module pops up partially.
- 3 Carefully remove the module from the slot.

### *Removing the sample memory module*

- 4 Replace the cover plate and screw.
- 5 Turn the computer over and restart it.

## Installing a memory module in the primary slot

### NOTE

Primary memory module installation requires significant computer disassembly and reassembly. If you are uncomfortable with this, please contact your Toshiba sales representative for a service professional to complete this procedure.

### NOTE

If you install any memory module in your computer, be sure that a memory module resides in the primary slot. The computer does not boot when the primary slot is vacant. Toshiba recommends installing a memory module in the secondary slot first (due to the ease of installation) before removing and installing a memory module in the primary slot.

If the computer is on, begin at [step 1](#); otherwise, skip to [step 2](#).

- 1 Save your work, then shut down your computer completely using the Shut down or Turn Off command.

See “Turning off the computer” on page 54.

- 
- 2 Unplug the computer.
- 

**CAUTION**

Installing a memory module with the computer's power on may damage the computer, the module, or both.

---

- 3 Close the display panel and remove any cables you may have connected.
- 4 Turn the computer upside down.
- 5 If the battery lock is in the locked position, slide it to the unlocked position.
- 6 Slide the battery release latch to release the battery.
- 7 Locate and remove the retaining screw. Place the screw in a safe place so that you can retrieve it later.

*Removing the sample retaining screw*

- 8 Turn the computer over and slide the display latch to the right and open the display panel.
- 9 Insert a thin object under the rim of the keyboard brace and lift out the brace.

### *Removing the sample keyboard brace*

- 10** Remove two screws securing the keyboard. Place the screws in a safe place so that you can retrieve them later.
- 11** Lift up the back of the keyboard, rotate it toward you and lay in face down on the palm rest.

### *Rotating the sample keyboard*

- 12** Remove the retaining screw and the metal brace. Place the screw in a safe place so that you can retrieve it later.
- 13** Remove the existing memory module from the slot by pulling the clips away from the memory module. Place the module in antistatic packaging and store it in a safe place.

### *Removing the sample metal brace*

- 14** Remove the new memory module from its antistatic packaging.
- 15** Holding the memory module by its edges so that the gold connector bar faces the slot, fit the module into the socket so it lies flat and is secured by two latches on either side.

The clips on either side of the module will click to secure the module.

### *Installing the sample memory module in the primary slot*

- 
- 16** Replace the metal brace and the screw.
  - 17** Insert the tabs on the front of the keyboard into corresponding notches on the computer, seat the keyboard, and secure it with the two screws.
  - 18** Seat the keyboard brace and press to secure latches.
  - 19** Replace the retaining screw.
  - 20** Install the battery pack.
  - 21** Turn the computer over and restart it.

When you turn on the computer, it automatically recognizes the additional memory.

## Inserting and removing PC Cards

Your computer comes with two stacked PC Card slots and supports three types of PC Cards:

- ❖ Type I cards—You can install up to two of these cards, one in each slot.
- ❖ Type II cards—You can install up to two of these cards, one in each slot.
- ❖ Type III cards—You can install just one of these cards.

## Inserting a PC Card

Before you insert a PC Card, refer to the documentation that comes with the card to see if you need to do anything before you insert it.

There are three different ways to insert a PC Card:

- ❖ Turn off the computer and follow the steps below.
- ❖ Insert the PC card while the computer is running. Follow the steps below.
- ❖ Hot swap the card (choose this method if there is already a PC Card in slot you wish to use). Stop the PC Card by clicking the **Safely Remove Hardware** icon on the System tray. After the PC Card stops, it is safe to remove it. Follow the steps below.

- 1 Locate the PC Card slot on the left side of the computer.

If you are hot swapping a PC Card, see [“Removing a PC Card” on page 83](#), steps 3 through 4.

- 2 Insert the PC Card.

If you have a Type III card, insert it into the lower part of the slot. If you have a Type I or Type II card, insert it into either the upper or lower part of the slot.

*Inserting the sample PC Card*

- 3 When the card is almost all the way into the slot, push firmly, but gently, to ensure a firm connection with the computer. Do not force the card into position.

## Removing a PC Card

- 1 Stop the PC Card by clicking the **Safely Remove Hardware** icon on the System tray. After the PC Card stops, it is safe to remove it.
- 2 Locate the PC Card eject button that corresponds to the slot in which your PC Card is installed.  
  
The top tab releases a card in the upper slot. The bottom tab releases a card in the lower slot.
- 3 Press the PC Card eject button once to extend it, and push the button in to remove the PC Card.

*Press the sample PC card eject button once to extend it*

The PC Card ejects slightly from the slot.

- 4 Grasp the edges of the PC Card and slide it out of the slot.

---

## Setting up a PC Card for your computer

Some PC Cards are ready to use as soon as you install them. Others, such as hard disk cards, network cards, and SCSI adapters, may need to be set up to work with your computer. To set up your PC Card, refer to the documentation that came with the card or refer to your operating system manual or online help.

---

## Inserting an SD™ card

---

**NOTE** MMC cards (multimedia cards) do not work in this slot.

---

Locate the SD card slot on the left side of the computer.

- ❖ To insert an SD card, turn the card so that the connector (metal area) faces down, then push the card in the slot until it locks in place.
- ❖ If Windows® does not recognize an inserted SD® card, remove and insert it again.
- ❖ To remove an SD card, press the card inward to release it and the card will pop out slightly.
- ❖ The green light on the front of the computer will glow when the card is being accessed.

---

**CAUTION**

Do not touch the SD connector. You could expose the storage area to static electricity which can destroy data.

Do not remove an SD card while data is being written or read. Even when the message “copying...” in the windows disappears, the computer may be writing to the computer and your data could be destroyed. Wait for the SD indicator light to go out.

## Connecting your modem to a telephone line

Your computer comes with a built-in modem that can be connected to a standard voice-grade telephone line.

Use the modem to:

- ❖ Access the Internet.
- ❖ Communicate with your office's local area network (LAN) or a larger corporate wide area network (WAN).

For specific information about connecting to a LAN or WAN, consult your network administrator.

- ❖ Send a fax directly from your computer.

### Connecting to a phone line

Before you can communicate using the modem, you need to connect it to a telephone line. Your computer's built-in modem port uses an RJ-11 jack to connect the modem to a standard voice-grade telephone line.

- 1 Plug one end of the telephone cable (purchased separately) into the modem port on the back of the computer.

*Connecting the telephone cable to the sample modem port*

- 2 Connect the other end to the RJ-11 wall jack.

*Connecting to a wall jack*

**CAUTION**

The modem is designed for use with a standard analog telephone line. Do not connect the modem to a digital telephone line. A digital line will damage the modem.

Now you are ready to send a fax or use the modem to connect to an online service or the Internet.

For more information on using a modem, see [“Setting up for communications” on page 147.](#)

# Chapter 3

## Learning the Basics

---

This chapter covers the basics of using your computer.

### Computing tips

- ❖ Save your work frequently.

Your work stays in the computer's temporary memory until you save it to the disk. If the network you are using goes down and you must restart your computer to reconnect, or your battery runs out of charge while you are working, you will lose all work since you last saved.

See [“Saving your work” on page 99](#) for further information.

HINT: Some programs have an automatic-save feature that you can turn on. This feature saves your file to the hard disk at preset intervals. See your software documentation for details.

---

- ❖ Back up your files to disks (or other removable media) on a regular basis. Label the backup copies clearly and store them in a safe place.

---

If your hard disk suddenly fails, you may lose all the data on it unless you have a separate backup copy.

- ❖ Use Error-checking and Disk Defragmenter regularly to conserve disk space and improve performance. Consult your operating system documentation for more information on these and other utilities.
- ❖ Scan all new files for viruses. This precaution is especially important for files you receive via diskette, email, or download from the Internet.
- ❖ Take frequent breaks to avoid repetitive-motion injuries and eyestrain.
- ❖ Do not turn off the computer if a drive indicator light indicates a drive is active.

Turning off the computer while it is reading from or writing to a disk may damage the disk, the drive, or both.

- ❖ Before turning off the computer, use the Turn off computer command or Standby command. See [“Powering down the computer” on page 112](#) to learn more about Standby.

---

**NOTE**

The Windows® XP operating system records information, such as your desktop setup, during its shutdown procedure. If you do not let the Windows® XP operating system shut down normally, details such as new icon positions may be lost.

---

## Using the keyboard

Your computer’s keyboard contains character keys, control keys, function keys, and special Windows® keys, providing all the functionality of a full-size keyboard.

*Sample keyboard*

## Character keys

Typing with the character keys is very much like typing on a typewriter, except that:

- ❖ The space bar creates a space character instead of just passing over an area of the page.
- ❖ The lowercase letter l (el) and the number 1 are not interchangeable.
- ❖ The uppercase letter O and the number 0 are not interchangeable.
- ❖ The Caps Lock key changes only the alphabet keys to upper case—the number and symbol keys are not affected. The caps lock light next to the caps lock key glows when you press the Caps Lock key.

## Making your keyboard emulate a full-size keyboard

Although your computer's keyboard layout is compatible with a standard full-size keyboard, it has fewer keys.

A standard full-size keyboard has two Enter, Ctrl, and Alt keys, editing keys, cursor positioning keys, and a numeric keypad. Pressing the Fn key simultaneously in combination with one of the specially marked keys allows you to emulate a full-size keyboard.

Your computer's keyboard has only one Enter and one Ctrl key. Most of the time this does not matter. However, some programs assign separate functions to the right and left Ctrl and Alt keys, or to the regular and numeric pad Enter keys on the full-sized keyboard. Using the Fn key you can simulate these separate keys, as follows:

- ❖ Press Fn and Ctrl simultaneously to simulate the Ctrl key on the right side of the enhanced keyboard.
- ❖ Press Fn and Enter simultaneously to simulate the Enter key on the numeric pad of the enhanced keyboard.

## Ctrl, Fn, and Alt keys

### *Sample Ctrl, Fn, and Alt keys*

The Ctrl, Fn, and Alt keys do different things depending on the program you are using. For more information, see your program documentation.

## Function keys

The function keys (not to be confused with the Fn key) are the 12 keys at the top of the keyboard.

### *Sample function keys*

F1 through F12 are called function keys because they execute programmed functions when pressed. Used in combination with the Fn key, function keys marked with icons execute specific functions on the computer. For more information, see [“Fn-esse” on page 157](#), or [“Hot Keys” on page 220](#).

## Windows special keys

### *Sample Windows special keys*

Your computer's keyboard has two keys that have special functions in Windows:

- ❖ **Start key**—Opens the Start menu
- ❖ **Application key**—Has the same function as the secondary mouse button

## Overlay keys

The keys with gray numbers and symbols on the front of them form the numeric and cursor overlay. This overlay lets you enter numeric data or control the cursor as you would using the 10-key keypad on a desktop computer's keyboard.

### *Sample numeric and cursor control overlay*

---

## Using the overlay to type numeric data

The keys with the numbers on their right front are the numeric overlay keys.

To turn the numeric overlay on, press Fn and F11 simultaneously. The numeric mode light on the keyboard indicator panel glows when the numeric overlay is on.

You can still use the overlay keys to type alphabetic characters while the numeric overlay is on. To do so:

- ❖ For lowercase letters, hold down Fn while you type the letters.
- ❖ For uppercase letters, hold down both Fn and Shift while you type the letters.

To use the cursor control keys when the numeric overlay is on:

- ❖ Press and hold down Shift while you use the cursor control overlay keys.
- ❖ To return to the numeric overlay, release Shift.

To disable the numeric overlay, hold down the Fn key and press F11 again. The numeric mode light on the keyboard indicator panel goes out.

## Using the overlay for cursor control

The keys with the gray arrows and symbols on their left front are the cursor control overlay keys.

To turn the cursor control overlay on, press Fn and F10 simultaneously. The cursor control mode light on the keyboard indicator panel glows when the cursor control overlay is on.

To type alphabetic characters while the overlay is on:

- ❖ For lowercase letters, hold down Fn while you type the letters.

- 
- ❖ For uppercase letters, hold down both Fn and Shift while you type the letters.

To use the numeric overlay keys while the cursor control overlay is on:

- ❖ Hold down Shift while you use the numeric overlay keys.
- ❖ To return to the cursor control overlay, release Shift.

To disable the cursor control overlay, hold down the Fn key and press F10 again. The cursor control mode light on the keyboard indicator panel goes out.

## Using the TouchPad™

The TouchPad, the small, smooth square cutout located in front of the keyboard, is sensitive to touch. You to move the cursor with the stroke of a finger. Simply move your finger on the TouchPad in the direction you would like to move the cursor:

- ❖ To move the cursor to the top of the page, push your finger forward on the TouchPad.
- ❖ To move the cursor to the bottom of the page, drag your finger toward yourself.
- ❖ To move the cursor to the right side of the page, slide your finger across the TouchPad from left to right.
- ❖ To move it to the left side, slide your finger from right to left.

---

### NOTE

Because the TouchPad is much smaller than the display screen, moving your cursor across the screen often means having to move your finger several times across the TouchPad in the desired direction.

---

Once you've positioned your cursor, you can either click it into place by double-tapping the TouchPad or clicking the control buttons.

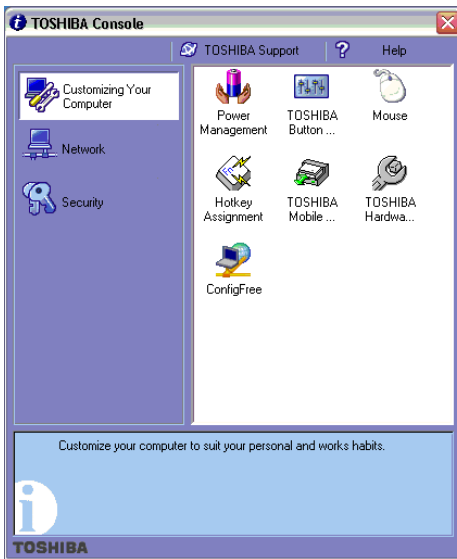

## Control buttons

When a step instructs you to click or choose an item, move the cursor to the item, then press and release the primary (left-hand) button. To double-click, press the primary button twice in rapid succession. The primary button usually corresponds to the left mouse button.

The function of the secondary (right-hand) button depends on the program you are using. It usually corresponds to the right mouse button. Check your program's documentation to find whether it uses the right mouse button.

## Using the TOSHIBA Console button

The TOSHIBA Console button, the left-hand button located above the keyboard near the left side speaker, activates the TOSHIBA Console. This gives you quick access to some common functions. You can change the function of this button so that it performs other operations if you desire.

*Sample TOSHIBA Console*

To reprogram the TOSHIBA Console button:

- 1 Click **Start**, then **Control Panel**, then **Printers and Other Hardware**.
- 2 Select **Toshiba Controls**.

This displays the **Toshiba Controls Properties** dialog box.

- 3 Select the box under the **TOSHIBA Console** button section to bring up the available options.

There are five options available when assigning a function to the TOSHIBA Console button:

- ❖ TOSHIBA Console
- ❖ Starts your Internet browser (Internet Explorer)
- ❖ Starts your email (Outlook Express)
- ❖ Disables the button

- ❖ Starts a custom program
- 4 Select the option to which you wish to assign the TOSHIBA Console button.  
  
To assign a custom program, choose **Select your program** and enter the appropriate information for the program, or select **Browse** to find the program.
- 5 Click **OK** twice when finished.

## Starting a program

The easiest way to start a program is to double-click the name of a file that is associated with the program you want to use. To find the file, use My Computer or Windows® Explorer.

If you prefer to open the program first, you can:

- ❖ Use the Start menu
- ❖ Use Windows® Explorer or My Computer to locate the program file
- ❖ Use the Run dialog box

The next three sections explain how to use these methods.

## Starting a program from the Start menu

When you install a program, the operating system usually puts an icon in the All Programs menu. To start a program that has an icon in the All Programs menu, follow these steps, which use the Windows® Wordpad program as an example:

- 1 Click **Start**, then point to **All Programs**.

The Windows® XP operating system displays the All Programs menu, which lists programs and program groups. If your program is listed, go to [step 3](#), otherwise, continue with [step 2](#).

- 2 Point to the program group, in this example, **Accessories**.

---

The Accessories menu is displayed.

- 3 Click the program, in this example, **Wordpad**.

Wordpad opens.

To close the program, click the **Close** button in the upper-right corner of the program's window.

## Starting a program from Windows® Explorer

If a program is not listed in the Programs menu, you can start it from Windows® Explorer. Windows® Explorer displays your computer's contents as a hierarchy or "tree." You can easily see the content of each drive and folder on your computer. To use this method, you should know the file name and location of the program's executable file (this file ends with .exe).

This example opens Wordpad using its file name, *wordpad.exe*.

- 1 Click **Start**, then point to **All Programs**.
- 2 Click **Accessories**.
- 3 Click **Windows Explorer**.
- 4 Double-click **My Computer**.
- 5 In the left part of the window, under the C: icon, double-click the folder containing the program, in this case **Program Files**.

The files are hidden, which means they are system files that are not ordinarily displayed. Click "Show the contents of this folder" to see the files.

Windows® Explorer shows the contents of the Program Files folder on the right side of the window. The left side of the window shows all the folders contained within the Program Files folder.

- 6 In the left part of the window, click **Windows NT**.

**7** Click **Accessories**.

Windows® Explorer shows the contents of the **Accessories** folder on the right side of the window.

**8** In the right part of the window, double-click **Wordpad** or **wordpad.exe**.

The operating system opens Wordpad.

To close the program, click the **Close** button in the upper-right corner of the program's window.

## Starting a program from the Run dialog box

This example uses the Run command to start Wordpad:

**1** Click **Start**, then click **Run**.

The Run dialog box appears.

### *Sample Run dialog box*

**2** In the Run dialog box:

- ❖ For a program in the Windows® folder, type just the program name. Otherwise type the full file path, if you know the program's location. Then click **OK**.
- ❖ If you do not know the location, click **Browse...**. In the Browse dialog box, enter the file name (for example *wordpad.exe*) and select the drive to search.

---

When the operating system has found the file, click **Open**.

---

HINT: To run the same program again, click the arrow to the right of the text box and select the command line from the drop-down list.

---

## Saving your work

Before you turn off the computer, save your work on the hard disk drive or a diskette. This is one of the most important aspects of computing.

---

TECHNICAL NOTE: Save your data even when you are using the Standby command, in case the main battery discharges before you return to work.

---

Saving documents is quick and easy, so it is a good idea to get in the habit of saving frequently.

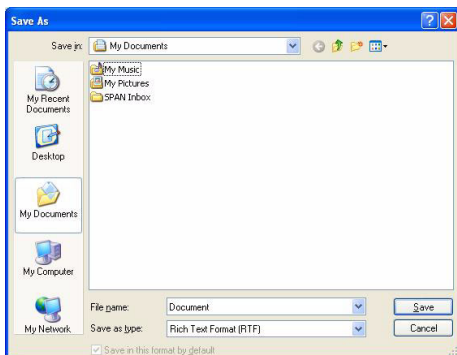

Many programs offer a feature that saves documents at regular intervals. Check your program's documentation to see if it has an automatic save feature.

## Saving files

- 1 On the **File** menu of your Windows® program, click **Save**.

If you are working with a document that already has a file name, that's all there is to it. If you created a new document, your program displays a Save As dialog box.

Use this dialog box to specify where to store the document and to give it a file name.

*Sample Save As dialog box*

- 2 Choose the drive and folder where you want your file to be stored.
- 3 Type a file name, then click **Save**.

**HINT:** To make another copy of the file you are currently working with, choose **Save As** from the **File** menu and give the new file a different name.

The Windows® XP operating system supports file names of up to 255 characters; the names can include spaces. Some applications still require MS-DOS® file names.

## File names

If you plan to share your files with a computer using a pre-Windows® 95 version of the Windows® operating system, the file name must be no more than eight characters long. Typically the file name also has an extension, consisting of a period and up to three additional characters.

You may use all the letters and numbers on the keyboard plus these characters: `_`, `^`, `$`, `~`, `!`, `#`, `%`, `&`, `{`, `}`, `(`, `)`, `@` and `'`. MS-DOS® file names are not case-sensitive and must not contain spaces.

---

## Using a file extension

Most programs assign an extension to the file name that identifies the file as being created in the program with a particular format. For example, Microsoft® Word saves files with a .doc extension. Any file name with an extension of “.doc” is assumed to be a Microsoft® Word file. Creating your own extension is usually unwise, since the program is unlikely to recognize a strange extension and may refuse to handle your file correctly.

## Printing your work

Ensure the operating system is set up for your printer as described in [“Connecting a local printer” on page 61](#).

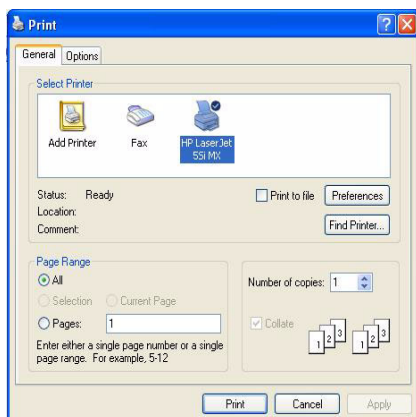

**HINT:** You only need to set up the printer the first time you connect it. If you use more than one printer or are changing printers, you will need to set up the Windows® XP operating system to run with the additional printer(s).

---

To print a file:

- 1 If your printer is not on, turn it on now.
- 2 Open the **File** menu of your Windows® program and click **Print**.

The program displays a Print dialog box.

*Sample Print dialog box*

- 3 Specify the print parameters. For example, the range of pages and number of copies to print.
- 4 Click **Print**.

## Using the DVD-ROM or multi-function drive

Optical storage has become the preferred medium for software, music, and video. Digital versatile discs (DVDs) provide a significant increase in data storage and support features that are not available on any other video platform. These features include wide-screen movies, multiple language tracks, digital surround sound, multiple camera angles, and interactive menus.

For these reasons, your computer may come with a DVD-ROM drive or multi-function drive.

If a DVD-ROM drive or multi-function drive is not currently installed in the Slim SelectBay, follow the instructions in [“Using Slim SelectBay® modules” on page 76](#).

**TECHNICAL NOTE:** Your DVD-ROM or multi-function drive is set to play region 1 (North America) DVD-ROMs. If you play a DVD disc from another region, the drive will automatically change to play in the format of the other region. The drive will allow you to change regions four times. On the fourth change, the region will be “locked in.” That is, the drive will only play DVDs from that last region. Note that changing from region 1 to region 2 and back to region 1 is counted as two changes.

**NOTE**

For optimum CD and DVD performance, it is recommended that you play CDs and DVDs while running the computer on AC power.

## DVD-ROM drive components

Your DVD-ROM or multi-function drive may look like this:

*Sample DVD-ROM drive shown*

**Drive in-use indicator light**—Indicates when the multi-function drive is in use.

**Eject button**—Releases the disc tray when the system is powered on.

**CAUTION**

Do not press the Eject button or turn off the computer while the Drive in-use indicator light is glowing. Doing so could damage the disc or the drive.

When the disc tray is open, be careful not to touch the lens or the area around it. Doing so could cause the drive to malfunction.

**Manual eject hole**—Releases the disc tray when the power is off. Use a straightened paper clip or other narrow object to press the manual eject button located inside the hole.

**CAUTION**

Never use a pencil to press the Eject button. Pencil lead can break off inside the computer and damage it.

## Inserting a compact disc

To insert a compact disc into the DVD-ROM or multi-function drive:

- 1 Make sure the computer is turned on.
- 2 Make sure the in-use indicator light is off.
- 3 Press the DVD-ROM or multi-function drive's eject button.

The disc tray slides partially out of the drive (about 1 inch).

*Sample pressing the eject button*

HINT: The drive will not open if the computer's power is off.

- 4 Grasp the tray and pull it fully open.

*Sample drive tray fully extended*

- 5 Hold the disc by its edges and check that it is clean and free of dust.

If the disc is dusty, clean it as described in “[DVD-ROM or multi-function drive problems](#)” on page 208.

- 
- 6 Place the disc carefully in the disc tray, label side up.

*Sample positioning the disc in the drive*

- 7 Gently press the disc onto the center spindle until you feel it click into place.

---

**CAUTION**

Handle DVDs and CDs carefully, making contact only with the center hole and edge. Do not touch the surface of the disc. Do not stack discs. If you incorrectly handle the discs, you could lose data.

---

- 8 Make sure the disc is completely on the spindle and is lying flat on the tray.

---

**CAUTION**

If you insert the disc incorrectly, it may jam the drive. If this happens, contact your network administrator for assistance.

---

- 9 Push the disc tray in by pressing gently on the center of the tray until it clicks into place.

You are ready to use the disc.

---

## Removing a compact disc with the computer on

To remove a compact disc (CD or DVD) with the computer turned on:

- 1 Press the Eject button on the drive.

---

**CAUTION** Do not press the Eject button while the in-use indicator light is glowing. Doing so could damage the disc or the drive.

Also, if the disc is still spinning when you open the disc tray, wait for it to stop spinning before you remove it.

---

- 2 Pull the tray until it is fully open, remove the disc, and place it in its protective cover.
- 3 Gently push the tray in to close it.

## Removing a compact disc with the computer off

To remove a compact disc with the computer turned off:

- 1 Insert a slender object, such as a straightened paper clip, into the manual eject hole.

---

**CAUTION** Never use a pencil to press the Eject button. Pencil lead can break off inside the computer and damage it.

---

- 2 Gently pull the tray out until it is fully open, remove the disc, and place it in its protective cover.
- 3 Gently push the tray in to close it.

## Caring for CDs and DVDs

- ❖ Store your discs in their original containers to protect them from scratches and keep them clean.
- ❖ Do not bend a disc or place heavy objects on top of it.

- ❖ Do not apply a label to, or otherwise mar the surface of a disc.
- ❖ Hold a disc by its outside edge. Fingerprints on the surface can prevent the DVD-ROM or multi-function drive from reading the data properly.
- ❖ Do not expose discs to direct sunlight or extreme heat or cold.
- ❖ To clean a disc that is dirty, wipe it with a clean, dry cloth. The most efficient method to clean it is to start from the center of the disc and wipe toward the outward edge (not in a circle). If necessary, moisten the cloth with water or a neutral cleaner (not benzine or rubbing alcohol). Let the disc dry completely before inserting it in the drive.

## Using PC Cards

---

TECHNICAL NOTE: For PCMCIA-compatible PC Cards, check the package to make sure they conform to the PCMCIA 2.1 standard (or later). Other cards may work with your computer, but are likely to be much more difficult to set up and use.

---

For information on inserting or removing a PC Card, see [“Inserting and removing PC Cards” on page 81.](#)

## Hot swapping

With PC Cards, you can replace one PC Card with another while the computer is on. This is called “hot swapping.”

## Hot swapping precautions

Although you can insert a PC Card at any time, remember not to remove a card while it is in use. Otherwise, you could lose valuable information.

---

For example:

- ❖ Do not remove a hard disk card while the system is accessing it.
- ❖ Do not remove a network card while you are connected to a network.
- ❖ Do not remove a SCSI card while any of the SCSI devices connected to it are operating.

Before removing a PC Card, stop it by clicking the **Safely Remove Hardware** icon on the System tray. After the PC Card is stopped, it is safe to remove.

## Using SD™ cards

If you do not already have a SD card inserted in the computer, you may do so following the procedures outlined in [“Inserting an SD™ card” on page 84](#).

**Important:** Do not use the **Copy Disk** function for SD cards. In order to copy data from one SD card to another, use the following procedure:

- 1 Format the target SD card in the same format as the source SD card.
- 2 Insert the source SD card.
- 3 Create a temporary folder on the hard disk drive.
- 4 Copy the contents of the source SD card into the temporary folder you created in [step 3](#).
- 5 Remove the source SD card.
- 6 Insert the target SD card created in [step 1](#).
- 7 Copy the file contents from the temporary folder to the target SD card.
- 8 Eject the target SD card.

## Using your computer at the office

By connecting an external monitor, external full-size keyboard, and a mouse, you can work with your notebook as if it were a standard office computer.

An external monitor or projector connects to the RGB port.

An external USB keyboard or a USB mouse connects to the USB port.

A serial mouse connects to the serial port of the optional Advanced Port Replicator III.

For more information on connecting these and other components, see [“Connecting Other External Devices” on page 57](#).

## Using a computer lock

For your own peace of mind, you may want to secure your computer to a heavy object such as your desk. The easiest way to do this is to purchase an optional PORT-Noteworthy® Computer Lock Cable.

*Sample PORT-Noteworthy® Computer Lock Cable*

To secure the computer:

- 1 Loop the cable through or around some part of a heavy object.

Make sure there is no way for a potential thief to slip the cable off the object.

- 2 Pass the locking end through the loop.

- 3 Slide the PC Card lock (located underneath the PC Card slots) to secure your PC Cards in place.
-  4 Insert the cable's locking end into the security lock slot on the computer, then give the key a quarter turn and remove it.

The computer is now securely locked.

*Sample locking the computer*

## Caring for your computer

This section gives tips on cleaning and moving your computer. For information about taking care of your computer's battery, see [“Running the computer on battery power”](#) on page 122.

### Cleaning the computer

#### **CAUTION**

Keep liquids, including cleaning fluid, out of the computer's keyboard, speaker, and other openings. Never spray cleaner directly onto the computer. Never use harsh or caustic chemical products to clean the computer.

To keep your computer clean, gently wipe the display panel and exterior case with a lightly dampened cloth. Ask your Toshiba dealer for suggestions for appropriate cleaning products.

## Moving the computer

Before moving your computer, even across the room, make sure all disk activity has ended (the drive indicator light stops glowing) and all external peripheral cables are disconnected.

---

**CAUTION**

Do not pick up the computer by its display panel or by the back (where the ports are located).

---

Although your notebook computer is built to withstand reasonable shock and vibration, transport it in a carrying case for long trips. You can purchase a carrying case from your Toshiba dealer, through the accessories information packaged with your system, or visit [accessories.toshiba.com](http://accessories.toshiba.com).

## Powering down the computer

---

**NOTE**

Pushing the power button before shutting down the Windows® operating system could cause you to lose your work. Make sure the system indicator panel's disk light and the drive-in-use light are off. If you turn off the power while a disk is being accessed, you may lose data or damage the disk and/or drive.

---

When you power down the computer, you have three options to choose from: Turn Off Computer (or Shut down), Standby, and Hibernation.

You can set the computer to turn on automatically at a time you designate. This option is helpful for transferring files by modem at night. You can set the computer to turn on and send or receive the files while you are asleep. This option is called Auto Power On.

**TECHNICAL NOTES:** Before using any of these options to power down your computer, save your files and make sure the disk activity lights are off.

If you change your mind and decide to continue working after all, wait a few seconds before turning the computer on again.

---

## Using Turn Off or Shut down

The Turn Off or Shut down command shuts the computer down completely. Use the Turn Off command if you are using the Windows XP Professional operating system when not connected to a domain server.

Use the Shut down command if you are using the Windows XP Professional operating system and are connected to a domain server.

When you start up again, the computer runs a self-test and loads the operating system. You must open any programs and files you want to use.

Factors to consider when choosing Turn Off or Shut down:

- ❖ No power is used while the computer is shut down. This is the most efficient mode if you will be away from your computer for an extended time.
- ❖ Restarting from Turn Off or Shut down uses the most time and battery power.
- ❖ When starting up again, the system does not automatically open the programs and files you were using.

For the Windows XP Professional operating system, follow these steps to shut down the computer:

- 1** Click the **Start** button, and then **Shut down**.

The Shut Down Windows dialog box appears.

- 
- 2 Select **Shut down** from the drop-down list.
  - 3 Click **OK**.

The computer shuts down completely.

---

**NOTE**

Holding Shift while the Turn Off computer Windows dialog box is open, changes the Stand By button to Hibernate. For more information about setting up hibernation [“Using Standby” on page 117](#).

---

## Shutting down more quickly

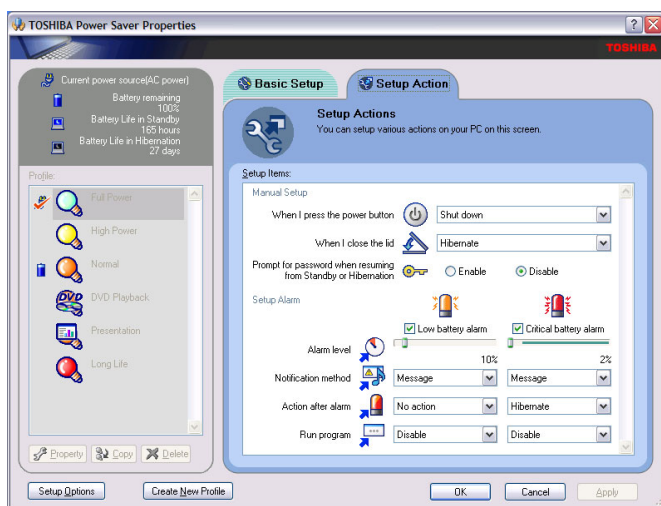

In addition to the above procedure, you can shut down the computer by either pressing the power button or closing the display panel.

To use either of these methods, you first need to turn it on in the TOSHIBA Power Management utility.

- 1 Click **Start, Control Panel**, and then **Performance and Maintenance**.

- 2 Double-click the **TOSHIBA Power Saver** icon.
- 3 Click the **Setup Action** tab.
- 4 Select the options you want from the drop-down lists.
  - ❖ **When I press the power button**  
Set this option to **Shut Down** to have the computer shut down when you press the power button.
  - ❖ **When I close the lid**  
Set this option to the action you want to occur when you close the LCD panel.

*Sample system power mode settings*

- 5 Click **OK**, then close the Control Panel.

## NOTE

For more information about the Power Saver utility, see “[PC Diagnostic Tool](#)” on page 172.

## Starting again after Shut down

To start the computer up again, press the power button until the on/off light changes to green.

## Using Hibernation

Hibernation mode shuts the computer down completely, but it first saves the current settings and configuration of the computer to the hard disk. Since Hibernation mode does not require power to maintain the saved information, the system settings are retained indefinitely. Restoring information from the hard disk takes longer than restoring it from memory. When you start up again, the computer runs a self-test, loads

the operating system, and then returns to the mode in which you left it.

Factors to consider when choosing Hibernation:

- ❖ While in Hibernation mode, the computer uses no battery power.
- ❖ Because the mode of the system is held on the hard disk, no data is lost if the main battery discharges.
- ❖ When starting up again, Hibernation uses less time and battery power than does Turn Off.
- ❖ Resuming from Hibernation uses a little more time and power to start up than restarting from Standby, because information is being retrieved from the hard disk rather than from memory.
- ❖ When starting up again, the computer returns to the mode in which you left it, including all open programs and files you were using.

## Configuring your computer for Hibernation

- 1 Click **Start**, **Control Panel**, and then **Performance and Maintenance**.

- 2 In the Control Panel window, double-click the **TOSHIBA Power Saver** icon.

- 3 Click the **Setup Action** tab.

- 4 Select **Hibernation** for the options you want.

- ❖ **When I press the power button**

Set this option to Hibernation so that the computer will go into Hibernation mode when you press the power button.

- ❖ **When I close the lid**

Set this option to Hibernation so that the computer will go into Hibernation mode when you close the display panel.

- 5 Click **OK**.

- 
- ❖ Click **OK** again, then close the Control Panel.

The computer is now set to automatically go into Hibernation when your option settings occur.

---

**NOTE**

For more information about the Power Saver utility, see [“PC Diagnostic Tool” on page 172](#).

---

Once the computer is configured, put the computer into Hibernation mode by either pressing the power button or closing the display panel, depending on the hibernation options taken.

## Starting again from Hibernation mode

To start up the computer from Hibernation mode, press the power button until the on/off light turns green. The computer returns to the screen you were using.

If you put the computer in Hibernation mode by closing the display panel, you can start it again by opening the display panel.

## Using Standby

The Standby command puts the computer into a power-saving mode. Standby holds the current mode of the computer in memory so that, when you power on the computer, you can continue working from where you left off.

Factors to consider when choosing Standby:

- ❖ While in Standby mode, the computer uses some battery power.
- ❖ Restarting from Standby uses less time and battery power than restarting from Turn Off Computer or Hibernation.

- ❖ When starting up again, the computer returns to the mode in which you left it, including all open programs and files you were using.
- 

**NOTE**

If you power down using the Standby command and the main battery discharges fully, your information will be lost. Be sure to save your work first.

---

To power down the computer using the Standby command, click **Start**, **Turn Off Computer**, and select **Stand By**.

*Sample Turn Off Computer Windows dialog box*

---

**NOTE**

If you hold down Shift, Stand By becomes Hibernate in the Turn Off Computer dialog box. To enter hibernation mode, you must hold down Shift while you select Hibernate.

---

The computer saves the status of all open programs and files, turns off the display, and goes into a low-power mode. The on/off light blinks amber indicating the machine is in Standby mode.

## Going into Standby mode more quickly

In addition, you can put the computer into Standby mode by either pressing the power button or closing the display panel. You can also specify an amount of time after which the computer automatically goes into Standby mode.

---

To use any of these methods, you first need to enable them in the TOSHIBA Power Saver utility.

- 1 Click **Start, Control Panel**, and then **Performance and Maintenance**.
- 2 In the Performance and Maintenance window, click the **TOSHIBA Power Saver** icon.
- 3 Click the **Action Setup** tab.
- 4 Select **Standby** for the options you want.
  - ❖ **When I press the power button**  
Set this option to Standby to put the computer into Standby mode when you press the power button.
  - ❖ **When I close the lid**  
Set this option to Standby to put the computer into Standby mode when you close the display panel.
- 5 Click **OK**, then close the Control Panel.

---

**NOTE**

For more information about the Power Saver utility, see "[PC Diagnostic Tool](#)" on page 172.

---

## Starting again from Standby mode

To start up the computer from Standby mode, press the power button until the on/off light changes to green. The computer returns to the screen you were using.

If you put the computer in Standby mode by closing the display panel, you can start it again by opening the display panel.

## Mobile Computing

---

This chapter covers all the aspects of using your computer on battery power.

### **Toshiba's energy-saver design**

Your computer enters a low-power mode when it is not being used, thereby conserving energy and saving money in the process. It has a number of other features that enhance its energy efficiency. Many of these energy-saving features have been set by Toshiba. We recommend you leave these features active, allowing your computer to operate at its maximum energy efficiency, so that you can use it for longer periods of time while traveling.

---

## Running the computer on battery power

The computer contains a removable Lithium-Ion (Li-Ion) battery pack that provides power when you are away from an AC outlet. This is the main battery. You can recharge it many times.

### Battery Notice

To ensure that the battery maintains its maximum capacity, operate the computer on battery power at least once a month until the battery is fully discharged. Please see [“Maximizing battery life” on page 132](#) for procedures for doing this. If the computer is continuously operated on AC power, either through an AC adapter or a docking station (if applicable to your system), for an extended period (more than a month) the battery may fail to retain a charge. This may shorten the life of the battery, and the battery light may not indicate a low-battery condition.

In addition to the main battery, you may also have a second battery installed in the Slim SelectBay. If you travel and need to work for many hours without an AC power source, you may purchase a battery module for use in the computer's Slim SelectBay, or carry additional charged battery packs with you.

The computer also has an internal real-time-clock (RTC) battery.

The RTC battery powers the RTC memory that stores your system configuration settings and the current time and date information. It maintains this information for up to a month while the computer is turned off.

**NOTE**

For optimum DVD performance, Toshiba recommends that you play DVDs while running on AC power rather than on battery power.

Battery life is less than when using similar applications in the Windows operating system.

**NOTE**

Over a period of time, and depending on the usage of the computer, the brightness of the LCD Screen will deteriorate. This is an intrinsic characteristic of LCD technology.

Screen will dim when the computer is operated on battery power and you may not be able to increase the brightness of the screen.

**TECHNICAL NOTE:** The RTC battery does not charge while the computer is turned off, even when AC power is attached.

## Charging the main battery

To charge the main battery while it is in your computer, plug the computer into a live electrical outlet. The battery charges whether the computer is on or off.

**TECHNICAL NOTE:** When your computer is using all of the power provided by the AC Adaptor to run applications, features, and devices, the recharging of the battery can not occur. Your computer's Power Saver utility can be used to select a power level setting that reduces the power required for system operation and will allow the battery to recharge.

The main battery light () glows amber while the battery is being charged, and glows green when it is fully charged.

The battery may not start charging immediately under the following conditions:

- ❖ The battery is extremely hot or cold.

To ensure that the battery charges to its full capacity, wait until it reaches room temperature.

- ❖ The battery is almost completely discharged.

Leave the power connected and the battery should begin charging after a few minutes.

## Charging the RTC battery

Your computer has an internal real-time clock (RTC) battery. The RTC battery powers the System Time Clock and BIOS memory used to store your computer's configuration settings. When fully charged, it maintains this information for up to a month when the computer is powered off.

The RTC battery may have become completely discharged while your computer was shipped, resulting in the following error message during startup:

BAD RTC BATTERY

BAD CHECKSUM (CMOS)

CHECK SYSTEM

---

### NOTE

The above error message may vary by computer model.

The RTC battery does not charge while the computer is turned off even when the AC adapter is charging the computer.

---

If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date, or stop working.

---

To recharge the RTC battery, connect the computer and leave it powered on for 24 hours.

---

**NOTE**

It is seldom necessary to charge the RTC battery because it charges while the computer is on. If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date or stop working.

When Hibernation mode is enabled and the RTC battery is completely discharged, a warning prompts you to reset the real-time clock.

---

The computer can be used while the RTC battery is being charged, although the charging status of the RTC battery cannot be monitored.

## Monitoring battery power

The computer's main battery light gives you an indication of the main battery's current charge:

- ❖ Green indicates the AC adapter has fully charged the battery.
- ❖ Amber indicates the AC adapter is charging the battery.
- ❖ Off indicates that the battery is not being charged.

**NOTE**

Battery life and charge time may vary depending upon power management settings, applications, and features used.

---

- 
- ❖ Flashing amber indicates that the computer is using battery power, and the battery's charge is running low.
- 

HINT: Be careful not to confuse the battery light (  ) with the on/off light (  ). When the on/off light flashes amber, it indicates that the system is suspended (using Windows® XP Standby command).

---

## Displaying remaining battery power

You can monitor the battery's remaining charge. The computer calculates the remaining battery charge as it operates, based on your current rate of power use.

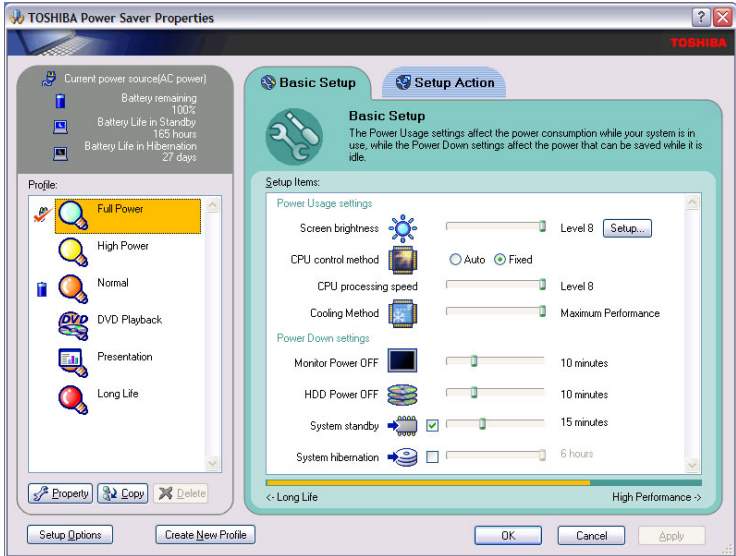

To show remaining power:

- 1 Click **Start**, then **Control Panel**, and then **Performance and Maintenance**.

- 2 In the Control Panel window, double-click the **TOSHIBA Power Saver** icon.

The TOSHIBA Power Saver Properties dialog box appears.

*Sample TOSHIBA Power Saver Properties Dialog Box*

The estimated battery life remaining is indicated on the top right-hand side of the Power Save application window.

With repeated discharges and recharges, the battery's capacity will gradually decrease. A frequently used older battery will not power the computer for as long as a new battery, even when both are fully charged.

**HINT:** Wait at least 16 seconds after turning on the computer before trying to monitor the remaining battery power. The computer needs this time to check the battery's remaining capacity and perform its calculations.

The computer drains battery power more quickly at low temperatures. Check your remaining charge frequently if you are working in temperatures below 50 degrees Fahrenheit.

The Windows operating system has additional power management options that can be accessed through an icon in the Control Panel. For more information, see [“PC Diagnostic Tool” on page 172](#).

## What to do when the battery alarm sounds

Your computer can be configured to warn you of a low battery charge condition so you can take the necessary steps to save your work.

Your Windows operating system offers two alarms before your system shuts down.

To change the default alarm settings:

- 1 Click **Start**, then **Control Panel**, and then **Performance and Maintenance**.
- 2 Click the **TOSHIBA Power Saver** icon.
- 3 Click the **Setup Action** tab.
- 4 Configure the **Alarm settings** to suit your needs.

Before your computer runs out of battery power, save your data and take one of the following actions:

- ❖ Suspend or shut down your computer.
- ❖ Shut down your computer and replace the main battery with a charged one.
- ❖ Install a secondary battery module in the computer's Slim SelectBay.
- ❖ Connect your computer to an AC power source.

---

## Changing batteries

---

**⚠ CAUTION**

When handling battery packs, do not drop or knock them. Also, be careful not to damage the casing or short-circuit the terminals.

---

To change the battery:

- 1 Save your work, then shut down your computer completely using the Shut down or Turn Off command.
- 2 Unplug the computer.
- 3 Close the display panel and remove any cables you may have connected.
- 4 Turn the computer upside down.
- 5 If the battery lock is in the locked position, slide it to the unlocked position.
- 6 Slide the battery release latch to release the battery.

*Sample battery release latch*

- 
- 7** Pull the discharged battery module out of the computer.

*Sample removing the discharged battery*

---

**⚠ WARNING**

If the battery is leaking or its case is cracked, put on protective gloves to handle it, and discard it immediately following the advice in [“Disposing of used batteries safely”](#) on page 133.

---

- 8** Insert the charged battery into the slot until the battery latch clicks.

The battery pack has been designed so that you cannot install it with reverse polarity.

---

**⚠ CAUTION**

If the battery does not slide into the slot easily, move the battery lock to the unlocked position and try again. Do not force the battery into position.

---

- 9** Reset the battery lock to the locked position.
- 10** Turn the computer right side up.

- 11 Reconnect any cables.
- 12 Restart the computer.

## Taking care of your battery

The following sections offer tips on how to take care of your battery and prolong its life.

### Safety precautions

- ❖ If the battery pack produces an odor, overheats or changes color or shape while it is being used or charged, turn off the computer's power immediately and disconnect the power cord from the power socket. Carefully remove the battery pack from the computer.
- ❖ Do not try to disassemble a battery pack.
- ❖ Do not overcharge or reverse charge a battery. Overcharging will shorten its life, and reverse charging could damage it.
- ❖ Avoid touching the metal terminals of the battery with another metal object. Short-circuiting the battery can cause it to overheat and may cause damage to the battery or the computer.
- ❖ Do not incinerate a spent battery, as this could cause it to explode and release toxic materials.
- ❖ If a battery is leaking or damaged, replace it immediately. Use protective gloves when handling a damaged battery.
- ❖ To replace the main battery, use an identical battery that you can purchase through [accessories.toshiba.com](http://accessories.toshiba.com).
- ❖ Reverse Polarity should be avoided with all batteries. The main battery is designed so that it cannot be installed in reverse polarity.
- ❖ Charge the battery pack only in the computer or in a battery charger designated as an approved option.

- ❖ When you install the battery pack, you should hear a click when it is seated properly.
- ❖ Do not expose the battery pack to fire. The battery pack could explode.

## Maximizing battery life

To maximize the life of your battery pack,

- ❖ At least once a month, disconnect the computer from a power source and operate it on battery power until the battery pack fully discharges. Before doing so, follow the steps below:
  - 1 Turn off the computer's power.
  - 2 Disconnect the AC adapter and turn on the computer's power. If it does not turn on, go to [step 4](#).
  - 3 Operate the computer on battery power for five minutes. If the battery pack has at least five minutes of operating time, continue operating until the battery pack is fully discharged. If the battery light flashes or there is some other warning to indicate a low battery, go to [step 4](#).
  - 4 Connect the AC adapter to the computer and the power cord to a power outlet. The DC-IN or AC power light should glow green, and the Battery light should glow amber to indicate that the battery pack is being charged. If the DC-IN or AC power-light indicator does not glow, power is not being supplied. Check the connections for the AC adapter and power cord.
  - 5 Charge the battery pack until the Battery light glows green.
- ❖ If you have extra battery packs, rotate their use.
- ❖ If you will not be using the system for an extended period, more than one month, remove the battery pack.

- 
- ❖ Disconnect the AC adapter when the battery is fully charged. Overcharging makes the battery hot and shortens life.
  - ❖ If you are not going to use the computer for more than eight hours, disconnect the AC adapter.
  - ❖ Store spare battery packs in a cool dry place out of direct sunlight.

## Disposing of used batteries safely

The life of a battery pack should last for years. When the battery pack needs replacing, the main battery light flashes amber shortly after you have fully recharged the battery.

You must discard a battery if it becomes damaged.

---

### **⚠ WARNING**

The computer's main battery is a Lithium-Ion (Li-Ion) battery, which can explode if not properly replaced, used, handled, or disposed of. Putting spent batteries in the trash is not only irresponsible, it may be illegal. Dispose of the battery as required by local ordinances or regulations.

Use only batteries recommended by Toshiba.

---

After repeated use, the batteries will finally lose their ability to hold a charge and you will need to replace them. Under federal, state and local laws, it may be illegal to dispose of old batteries by placing them in the trash.

Please be kind to our shared environment. Check with your local government authority for details regarding where to recycle old batteries or how to dispose of them properly. If you cannot find the information you need elsewhere, call Toshiba at: 1 (800) 457-7777.

## Conserving power

How long a fully charged battery pack lasts when you are using the computer depends on a number of factors, such as:

- ❖ How the computer is configured.
- ❖ How much you use the hard disk, DVD-ROM, multi-function, and diskette drives, or other optional devices.
- ❖ Where you are working, since operating time decreases at low temperatures.

There are various ways in which you can conserve power and extend the operating time of your battery:

- ❖ Enable Standby or Hibernation, which saves power when you turn off the computer and turn it back on again.
- ❖ Use Toshiba's power-saving options.

These power-saving options control the way in which the computer is configured. By using them, you can greatly increase the length of time you can use the computer before you need to recharge the battery.

Toshiba has combined these options into preset power usage modes or profiles. Using one of these modes lets you choose between maximum power savings and peak system performance. You may also set individual power-saving options to suit your own needs.

The following sections describe how to choose a power usage mode and discuss each power-saving option.

## Power usage profiles in Windows XP Professional

In Windows XP Professional, you can choose from predefined power usage profile or select your own combination of power management options. To do this:

- 1** Click **Start**, then **Control Panel**. Click the **TOSHIBA Power Saver** icon.

- 2 Select the appropriate profile and set your options.
- 3 For more information, see [“PC Diagnostic Tool” on page 172.](#)

## Using a hot key to set the power usage mode

You may use a hot key to set the power usage profile.

To set the power usage profile:

- 1 Press Fn and F2 simultaneously to display the power usage pop-up window.

*Sample Power usage profile pop-up window*

- 2 While continuing to press Fn, press F2 until you select the desired power usage profile.

The power usage profile for battery power are:  
Long Life, Normal, High Power, DVD-Playback, and  
Presentation.

The default power usage profile under AC power is  
Full Power.

- 3 Release the Fn key.

The pop-up window disappears. You are now using the  
selected profile.

For more information on setting the battery power usage  
profile, see [“PC Diagnostic Tool” on page 172.](#)

## Additional options for power

Depending on the amount of time you spend away from external power sources, the capacity of one battery pack may be sufficient for your needs. However, if you need more portable power, Toshiba provides these options:

- ❖ Purchase extra battery packs.
- ❖ Install a secondary battery module in the Slim SelectBay. See [“Using Slim SelectBay® modules” on page 76](#).
- ❖ Purchase a battery charger that charges one main battery pack and one secondary battery module at a time.

# Chapter 5

## Exploring Your Options

---

In this chapter, you will explore some of the special features of your notebook computer.

### Exploring the desktop

The desktop is the launching pad for everything you can do in the Windows® XP Professional operating system. You use its features to start programs, find documents, set up system components, and perform most other computing tasks.

---

**HINT:** The illustrated examples in this guide may appear slightly different from the screens displayed by your system. The differences are not significant and do not indicate any change in the functionality of your system.

---

## Finding your way around the desktop

Common desktop features include icons, the Start button, and the taskbar.

*Sample Windows® XP operating system desktop*

## Icons

An icon represents a file or program that can be quickly activated by double-clicking the icon. The icons initially displayed on your Windows® XP operating system desktop include:

**Recycle Bin**—Holds files you’ve deleted. You may be able to retrieve these files until you empty the Recycle Bin.

**TECHNICAL NOTE:** If you delete a file from a diskette, it does not go into the Recycle Bin. For more information on the Recycle Bin, see Windows® Help.

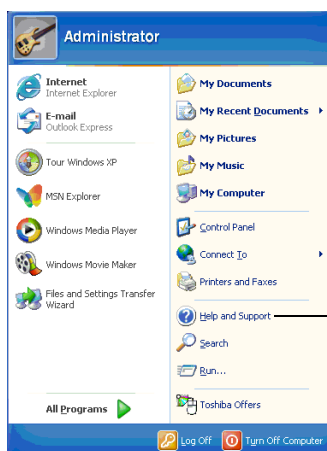

**Internet Explorer**—The Microsoft® Web browser that provides access to the Internet.

Your desktop may contain other icons depending on your configuration. See Windows® XP online Help and Support for more specific information on each icon and how to use it.

## Start button

You use the Start button to:

- ❖ Start programs
- ❖ Access Microsoft® Windows® XP operating system update information
- ❖ Open documents
- ❖ Adjust system settings
- ❖ Find files
- ❖ Access Windows® Help and Support
- ❖ Run programs
- ❖ Suspend system activity and shut down the computer

Click Help and Support

*Sample Windows XP Start menu*

For answers to common questions, click **Start**, then click **Help and Support** to open the Windows XP online Help.

### *Sample Windows XP online Help and Support*

Click an item or use the Search box to locate a specific topic.

## Quick Launch toolbar

The Quick Launch toolbar displays icons of tasks or programs, similar to desktop icons. You can access these icons quickly and conveniently at any time as they are not covered by the windows of other executing programs.

Before you may add icons to the Quick Launch toolbar you must activate it.

Right-click on the Taskbar. On the **Toolbars** submenu, select Quick Launch.

To add an icon to the Quick Launch toolbar, click the icon and drag it to the Quick Launch toolbar.

To activate a specific program, click the appropriate Quick Launch toolbar icon.

---

## Taskbar

Each time you open a program, a button associated with that program appears on the taskbar. With some programs, a button appears on the taskbar for each document or window you open. You can use these buttons to quickly switch between the programs or windows.

To make a program or window the currently active one, click the associated taskbar button.

You can personalize the taskbar to include not only shortcut icons but also your favorite Internet URL addresses.

**DEFINITION:** URL stands for Uniform Resource Locator, which is the address that defines the route to a file on the Web or any other Internet facility. Generically, it is known as the Web site address.

---

## System tray

The System tray displays icons of tasks or programs that run continuously in the background. To learn more about each task, position the cursor over the icon for a few moments and a short description of the task appears.

Typical tasks in the System tray are Current time, Power usage mode, Mouse properties, and speaker volume.

To activate a specific task, double-click the appropriate System tray icon. You may also right-click the icon to see other options.

---

## Exploring audio features

You can play .wav sound files or audio CDs using the built-in speakers, headphones, or external speakers. You can use your computer to record sounds using an optional external microphone.

### Using external speakers or headphones

Your computer is equipped with a full stereo sound system with internal speakers. Instead of using the internal speakers, you can connect headphones or a pair of external stereo speakers.

---

**⚠ WARNING**

Before using headphones to listen to an audio CD, turn the volume dial down. Playing the CD with the volume set too high could damage your ears.

---

---

**TECHNICAL NOTE:** Use amplified speakers that require an external power source. Other types of speakers will be inadequate to produce sound from the computer.

---

To play back sound files through headphones or external speakers:

- 1 Locate the headphone jack on the computer.
- 2 Using any necessary adapters, plug the cable from the headphones or external speakers into the headphone jack.

The headphone jack requires a 16-ohm stereo mini jack.

To adjust the volume:

- ❖ For external speakers, use the volume controls located on the speaker(s).

- 
- ❖ For headphones, use the computer's volume control dial located on the front of the computer.

## Recording sounds

You may record sounds and save them as .wav files using an optional external microphone.

DEFINITION: A .wav (pronounced “wave”) file is the format for storing sound in files in Windows.

---

TECHNICAL NOTE: If you record MP3 files, you will only be able to play them on a device capable of playing MP3 files.

---

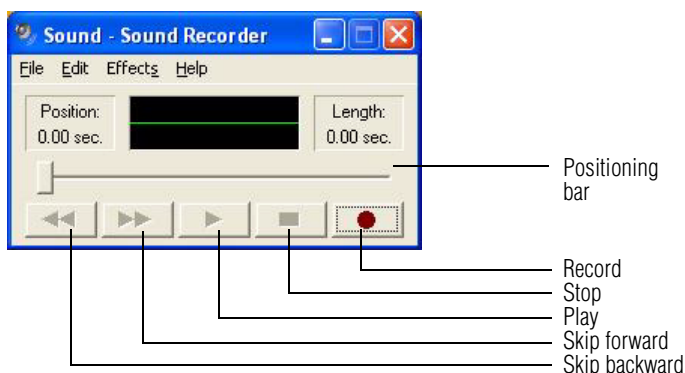

## Using a microphone

To record sounds using the microphone:

- 1 Connect the microphone to the external microphone jack located on the right side of the computer.
- 2 Click **Start**, point to **Programs**, **Accessories**, and then click **Entertainment**.
- 3 Click **Sound Recorder**.

The Sound Recorder window displays.

*Sample Sound Recorder screen*

**4** Click the **Record** button.

**5** Speak normally into the microphone.

**6** When you have finished recording, click the **Stop** button.

#### NOTE

The maximum recording time is 60 seconds.

**7**

**8** To hear what you just recorded, click the **Play** button.

**9** To save the file, select **Save** from the **File** menu.

## Adjusting recording quality

The better the quality of the recording, the more disk space the sound file requires. Experiment to find a balance that fits your needs.

**1** Open Sound Recorder, if necessary.

**2** Click **Start**, point to **Programs**, **Accessories**, **Entertainment**, and then click **Sound Recorder**.

**3** In the Sound Recorder window, click **Edit**, then click **Audio Properties**.

- 4 In the Audio Properties dialog box, adjust the Recording Volume, Preferred device, and Preferred quality according to your needs.
- 5 Click **OK**.

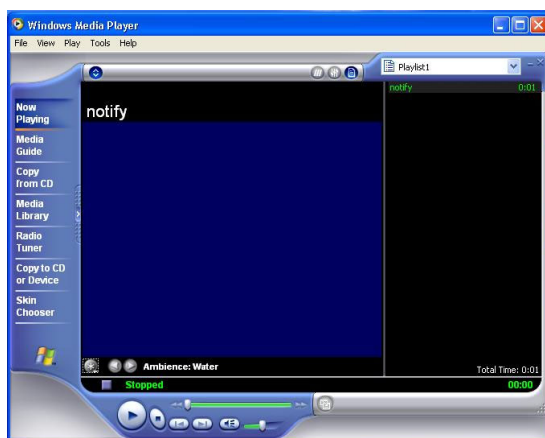

Your new settings take effect the next time you record.

## Playing an audio CD-ROM

Insert an audio CD and close the disc tray. The CD begins to play.

If the computer is turned on, Windows Media® Player opens and the CD begins to play. You can use the Windows Media Player program to control the CD.

To access the Windows Media Player, you can open it through the Start menu or activate it from the taskbar.

*Sample Windows Media Player screen*

The CD Player control panel works much like an ordinary compact disc player:

- ❖ To play the CD or to pause, click the **Play/pause** button on the CD Player control panel.

- 
- ❖ To stop the CD, click the **Stop** button.
- 

**⚠ WARNING**

Before using headphones to listen to an audio CD, turn the volume dial down. Playing the CD with the volume set too high could damage your ears.

---

## Exchanging data with another computer

To transfer a large amount of information between computers, you can use the Windows® XP Briefcase, or a specialized synchronization program and the computer's parallel port.

### Transferring files

You can transfer files to another computer using your infrared port, or with an adapter cable.

To transfer files through the parallel port, you need an optional LapLink® compatible parallel cable.

- 1 Connect the cable.
- 2 Load the transfer program on both computers.
- 3 Set any specific options.
- 4 Start the transfer.
- 5 When you have finished transferring files, close the programs on both computers.

### Getting help transferring files

- 1 Click **Start**, then **Help and Support**.
- 2 Click the **Index** icon on the toolbar.

- 3 In the dialog box, type direct cable connection.
- 4 Follow the online guide instructions.

## Setting up for communications

In order to connect to the Internet, use an online service, or communicate across the telephone lines with another computer, you may need:

- ❖ A modem (one comes with your computer)
- ❖ A telephone line
- ❖ A browser or communications program
- ❖ An Internet Service Provider (ISP) or online service if you plan to use the Internet

## Determining the COM port

Your modem is connected to one of the computer's COM (communications) ports. The default setting for the modem is COM3.

The following procedure is intended to support you if you need to either upgrade your modem or reset the port to the default settings.

If you are having trouble connecting through the modem, you may need to determine the current COM port name and possibly change it.

To find out which port your modem is connected to:

- 1 Click **Start**, then **Control Panel**.

Windows XP opens the Control Panel.

- 2 Double-click **Phone and Modem Options**.

Windows XP displays the **Phone and Modem Options Properties** dialog box.

- 3 Click the **Modems** tab.

Your modem should be listed next to one of the computer's COM ports.

- 4 Make a note of the COM port number.
- 5 To verify that the modem is set up properly, select the modem you wish to check and then click **Properties** to bring up the dialog box with information specific to that modem.
- 6 Click the **Diagnostics** tab, and then click **Query Modem**.  
Windows XP communicates with the modem and displays identifying information reported by the modem. If Windows XP cannot communicate with the modem, it displays an error message. Consult the troubleshooting sections of your modem and Windows XP documentation.
- 7 Click **OK** to close the properties dialog box for that specific modem.
- 8 Click **OK** to close the Modem Properties dialog box.
- 9 Close the Control Panel.

## Connecting the modem to a telephone line

Before you can use the modem, you must connect it to a standard voice-grade telephone line. For more information, see [“Connecting to a phone line” on page 85](#).

## Connecting your computer to a network

You can connect your computer to a network to increase its capabilities and functionality using one of its communication ports.

---

## Accessing a network

To access a network:

- ❖ At the office, connect an Ethernet cable to the RJ-45 jack on your computer. For specific information about connecting to the network, consult your network administrator.
- ❖ While you are at home or traveling, you need a dial-up connection. Ask your network administrator for the telephone number of the network.
- ❖ Wirelessly, you need an optional wireless networking PC Card or an optional Wi-Fi® module. For more information about wireless networking, refer to your wireless network device documentation or contact your authorized Toshiba service provider.

## Setting up the connection

To set up an office connection, consult your network administrator for network settings and additional considerations.

To set up a dial-up connection, use the New Connection Wizard:

- 1 Click **Start** and point to **All Programs**.
- 2 Point to **Accessories**, then to **Communications**, and click **New Connection Wizard**.
- 3 Enter the phone number of your network connection and let the program dial the number.

The computer connects to the network.

## Using the Ethernet LAN Port

When your computer starts, Windows attempts to contact a Dynamic Host Configuration Protocol (DHCP) server. If the computer is not connected to a network, it may pause a few

minutes as it waits for a reply. To avoid this delay, you can reconfigure Windows to disable the LAN port.

To disable the LAN port:

- 1 Click **Start**, then **Control Panel**.
- 2 Double-click the **System** icon, click the **Hardware** tab, and then click the **Device Manager** button.
- 3 Select the network adapter in **Network Adapters**.
- 4 Click the **Properties** icon on the toolbar.
- 5 Select the **Do not use this device (disable)** option from the **Device usage** drop-down.
- 6 Click **OK**.

Your LAN port is now disabled.

To enable the Ethernet LAN port, repeat steps one through four. Select the **Use this device (enable)** check box, and click **OK**.

## Setting up a wireless connection

For information on how to set up a wireless connection, refer to the online help that came with your operating system or your network administrator.

## Using the Wi-Fi module

---

### NOTE

The transmission speed over the wireless LAN and the distance over which wireless LAN can reach may vary depending on surrounding electromagnetic environment, obstacles, access point design and configuration, and client design and software/hardware configurations.

---

Wireless fidelity (Wi-Fi) refers to any type of 802.11 network. With an integrated Wi-Fi module, you can access

---

wireless networks in public areas like airports, hotels and convention centers or anywhere people gather. Some networks require you to manually configure your access connection; others do not.

It is recommended that you do not remove the module from your computer. For assistance, contact a Toshiba Wireless Authorized Service Provider.

---

**NOTE**

You can use the System tray's PC Card icon to turn off your Wi-Fi Mini PCI. However, if you do so, you will need to restart the computer in order to reactivate the module.

---

To configure Wi-Fi for your wireless communication, follow these steps:

- 1** Click the **Local Area Connection** icon on the System tray.  
The Local Area Status Connection window displays.
- 2** Click **Properties** to bring up the dialog box with information specific to the Wi-Fi device connection.
- 3** Configure the settings as required.

## **Toshiba's online resources**

Toshiba maintains a number of online sites to which you can connect. These sites can provide information about Toshiba products, give help with technical questions, and keep you up to date with future upgrades. For more information, see [“Contacting Toshiba” on page 216](#).

## An overview of using the Internet

The following sections give a quick introduction to the Internet and some of its exciting features, such as:

- ❖ [The Internet](#)
- ❖ [The World Wide Web](#)
- ❖ [Internet Service Providers](#)
- ❖ [Connecting to the Internet](#)
- ❖ [Surfing the Internet](#)
- ❖ [Internet features](#)
- ❖ [Uploading and downloading files from the Internet](#)

### The Internet

The Internet is an association of thousands of networks and millions of computers around the world connected by communications lines. They all work together to share information.

### The World Wide Web

The World Wide Web (or “Web”) is a subset of the Internet—a collection of interlinked documents (located on computers connected to the Internet) that work together using a specific Internet protocol called Hypertext Transfer Protocol (HTTP).

The World Wide Web offers information as text, images, audio, or video to be referenced from anywhere in the world. Special programs called Web browsers are specifically designed to work with HTTP. They make it easier to connect to a particular network address and send and receive information.

---

## Internet Service Providers

To connect a computer directly to the Internet, many people and businesses use an Internet Service Provider (ISP). An ISP is a company that has the equipment and the telecommunication lines necessary to maintain an Internet connection.

You can connect to the Internet by using a telephone and modem or through other higher-speed communication methods such as Digital Subscriber Lines (DSL), cable, and satellite links.

## Connecting to the Internet

To connect to the Internet, you may need:

- ❖ A modem and a telephone line, or a LAN connection
- ❖ A Web browser
- ❖ An Internet Service Provider (ISP) account

The Microsoft® Web browser Internet Explorer is automatically configured on your system so that when you first start it, it guides you through signing up for a new ISP account, or assists you in setting up your computer to work with your existing ISP.

Once you have established an ISP account, you can connect to the Internet.

- 1 Connect your computer's modem to a telephone line. For more information on connecting a modem, see [“Connecting to a phone line” on page 85](#).

- 2 Start your Web browser. Have your modem dial the ISP's telephone number, and establish a connection with the ISP's computer.

If you are using your computer at the office, then you probably connect to the Internet through your company's network. See your network administrator about connecting to the Internet.

## Surfing the Internet

Once connected to the Internet, the Web browser displays a home page, for example, your ISP's home page on the Internet or your company's Web site home page.

To visit a desired Web site, type in the Web address. The Web address, or Uniform Resource Locator (URL), is a unique identifier for that computer system linked to the Internet. Web addresses can also appear within a Web page's text, and are known as links. Clicking a link automatically transfers your Web browser to that site.

You can also use a Search Engine, a Web site specifically designed to help you look for information.

## Internet features

The Internet offers many types of communication tools to help you perform many tasks.

### ❖ Internet email

To send and receive email of your own, you need a mailbox on the Web, or an email address.

If you have an account with an ISP, you can probably set up an email address at the same time you sign up for the service.

### ❖ Internet chat rooms

A chat room is a Web site that offers a place where people with similar interests and ideas communicate in real-time, one-on-one or in groups, by typing messages which are instantly viewed by others on their computer screens.

### ❖ Internet news groups

A newsgroup is similar to a chat room, but instead of using a dedicated site to converse about a specialized subject with others in real-time, it uses a Web site as a clearinghouse where all the messages are placed, like a gigantic bulletin board.

---

❖ Online shopping

Many Web sites offer products and services for sale.

## **Uploading and downloading files from the Internet**

Transferring files from one computer to another is termed uploading (transferring data from your computer to a site on the Web), or downloading (transferring data from a site on the Web to your computer).

There are several ways to upload or download data. It can be as simple as attaching a file or document to an email, or you can use the File Transfer Protocol (FTP) features of your Web browser to transfer large amounts of data.

# Chapter 6

## Toshiba Utilities

---

Your notebook computer includes several utilities designed to help you reconfigure your system and best meet your individual needs. Together, these allow you to ascertain certain system details, set additional options, and change default values. The Toshiba utilities are:

- ❖ Fn-esse
- ❖ TOSHIBA HW Setup
- ❖ TOSHIBA Power Saver
- ❖ TOSHIBA Mobile Extension
- ❖ TOSHIBA Password Utility
- ❖ TOSHIBA Zooming Utility
- ❖ TOSHIBA CD/DVD Drive Acoustic Silencer
- ❖ TOSHIBA SD Memory Boot Utility
- ❖ PC Diagnostic Tool

Each of these utilities is described in this chapter.

---

## Fn-esse

Desktop shortcuts and Toshiba's Fn-esse program provide quick ways to open programs, documents, and folders from within any Windows® program without using the Start menu. For more information on creating desktop shortcuts, refer to the operating system documentation that came with your computer.

This section describes how to use the Fn-esse program to quickly access your programs and files.

With Fn-esse, you can assign an Fn key combination to:

- ❖ Open a Windows® XP operating system program.
- ❖ Open a file in its associated program.
- ❖ Display a customized folder of programs and/or files from which to choose.

Fn-esse also has several keys that perform preassigned operations, known as hot keys. For more information, see [“Hot Keys” on page 220](#).

You can assign any key that is not associated with a hot key or a keyboard overlay.

## Starting Fn-esse

- 1 Click **Start**, point to **All Programs**, **Toshiba**, **Utilities**, then click **Fn-esse**.

The Fn-esse keyboard appears.

*Sample Fn-esse window*

The keys are color-coded as follows:

- ❖ Available keys are dark gray with white letters

## Keeping Your Files Safe

---

You may have files on your computer that you want to keep private. Your computer comes with several options that can help you keep your computer and files safe from unwanted intrusion.

This chapter describes the security options for your notebook computer.

### Using passwords in Windows

Setting a password lets you leave your computer, secure in the knowledge that nobody can access your files. When you set a password, you must enter the password before you can work on your computer again.

Toshiba supports the following types of passwords on the computer:

- ❖ An instant (user-level) password that secures your open programs and files when you need to leave the computer temporarily.
- ❖ A power-on (user-level) password that requires you to enter the password whenever you start the computer.

- ❖ A supervisor-level password that protects system settings by restricting who can make changes in Toshiba Utilities and System Setup. This is useful if more than one person is using the computer.
- ❖ A hard disk drive password that protects your data by requiring a password when you try to access the hard disk, whether it's in your computer or in another system. You can set a hard disk drive user password and/or a hard disk drive master password.

**CAUTION**

If you choose to set a hard disk drive user password, we strongly recommend that you set a hard disk drive master password as well.

If you set a hard disk drive user password and later forget the password, YOU WILL NEVER BE ABLE TO ACCESS YOUR HARD DISK AGAIN, unless you've set a hard disk drive master password.

Toshiba is not responsible for any losses that may occur to you, your organization or others as a result of the inability to access the hard drive.

---

## Setting user-level passwords

Setting password lets you leave your computer, secure in the knowledge that nobody can access your files. When you set a password, you must enter the password before you can work on your computer again.

Toshiba supports the following types of user-level passwords on your computer:

- ❖ A power-on password—Prevents unauthorized users from starting or restarting the computer.
- ❖ An instant password—Secures your open programs and files when you need to leave the computer temporarily.

---

**CAUTION**

Make sure you use a password you can remember easily. If you ever forget your password, contact your network administrator.

A good way to prevent forgetting your password is to create a password service diskette. Refer to [“Setting a power-on \(user-level\) password” on page 176](#) for instructions.

---

## Using an instant user-level password

An instant password secures your system with a single keystroke. Use this feature when you leave your desk for a few minutes and do not want to turn off the computer.

- 1 Press and hold Fn, then press F1.

The screen goes blank.

- 2 To return to work, press a key.

On the logon screen, select a user.

- 3 For the selected user:

- ❖ If you have not registered a Windows user password, press Enter.
- ❖ If you have registered a user password, type the password and press Enter.

The desktop displays.

## Setting a Windows user password

To register a password for the Windows Logon and Instant Password functions:

When your computer prompts you to enter your password, type it in and press Enter. If you enter the password correctly, the computer continues with its normal startup procedure. If you enter an incorrect password, the computer beeps. After three incorrect attempts, the system turns off automatically.

If you've forgotten your password and you have a password service diskette:

- 2 Turn on the computer.  
The system prompts you for your password.
- 3 Insert the password service diskette into the diskette drive and press Enter.

---

The system prompts you, “Set Password Again (Y/N)?”

---

**CAUTION**

## Hard disk drive passwords

Your computer comes with a System Setup utility that lets you set two types of hard disk drive passwords—user and master. These passwords protect your primary and secondary hard disks as follows:

- ❖ Setting a hard disk drive user password prevents an unauthorized user from accessing your hard disk, even if it is removed and installed on another computer. This password does not encrypt data on the hard disk.
- ❖ Setting a hard disk drive master password lets you bypass the hard disk drive user password and access your hard disk, in case you forget the hard disk drive user password. If you choose to set a hard disk drive master password, you should set it before you set a hard disk drive user password.

**HINT:** The hard disk drive shipped with your computer may not support the master password feature. When you attempt to set master password protection, your computer may alert you that this feature is not supported by your drive. If this happens and you want to establish a master password for your hard disk, contact your network administrator for instructions.

# Chapter 8

## If Something Goes Wrong

---

Some problems you may encounter when using your notebook computer are relatively easy to identify and solve. Others may require help from your dealer or the manufacturer of a software program.

This chapter aims to help you solve many problems by yourself. It covers the problems you are most likely to encounter. If all else fails, contact Toshiba. You will find information on Toshiba's support services at the end of this chapter.

### Problems that are easy to fix

#### **Your program stops responding.**

If you are working with a program that suddenly freezes all operations, chances are the program has stopped responding. You can exit the failed program without shutting down the operating system or closing other programs.

To close a program that has stopped responding:

- 1** Press Ctrl, Alt, and Del simultaneously (once).

The Windows Task Manager window appears.

- 2 Click the **Applications** tab.

If a program has stopped responding, the words “not responding” appear beside its name in the list.

- 3 Select the program you want to close, then click **End Task**.

Closing the failed program should allow you to continue working. If it does not, continue with step 3.

- 4 Close the remaining programs one by one by selecting the program name, then **End Task**.

- 5 Click **Start, Turn off computer**.

The Turn off computer window appears.

- 6 Click **Turn off**.

The computer turns off.

### **Your program performs an illegal operation.**

If you receive the message, “Your program has performed an illegal operation,” you should record the details of the message and consult the software manufacturer.

To record the details:

- 1 Click the **Details** button and select the text the operating system displays.

The Details button displays information that the software manufacturer needs to help you solve your problem.

- 2 Press Ctrl and c simultaneously to copy the text to the clipboard.

- 3 Open Notepad (click **Start**, point to **All Programs**, then point to **Accessories** and click **Notepad**).

- 4 Press Ctrl and v simultaneously to paste the details into Notepad.

- 5 Add a paragraph break and type some notes describing what you were doing when you received the message.

- 
- 6** Save the file and refer to it when you contact the software manufacturer.

## Problems when you turn on the computer

These problems may occur when you turn on the power.

### **The computer will not start.**

Make sure you attached the AC adapter and power cable properly or installed a charged battery.

Press and hold down the power button for a few seconds.

If you are using the AC adapter, check that the wall outlet is working by plugging in another device, such as a lamp.

### **The computer starts but, when you press a key, nothing happens.**

You are probably in Stand By mode and have a software or resource conflict. When this happens, turning the power on returns you to the problem instead of restarting the system. To clear the condition, press Ctrl, Alt, and Del simultaneously.

Clearing the condition may get the computer running, but it will not solve a resource conflict. Read the documentation that came with the conflicting device and [“Resolving a hardware conflict” on page 197](#).

### **The computer is not accessing the hard disk or the external diskette drive.**

Your computer normally loads the operating system from the hard disk. If you have a hard disk problem, you will not be able to start the computer. Insert a system diskette into the external diskette drive and press F12 when the machine starts, then use the arrow keys to select the boot-up device.

**The computer displays the WARNING RESUME FAILURE message.**

The computer was placed in Stand By mode and the battery has discharged. Data stored in the computer's memory has been lost.

To charge the battery, leave the computer plugged into a live wall outlet for several hours. For more information, see [“Power and the batteries” on page 202.](#)

**The computer displays the Non-System disk or disk error message.**

Make sure there is no diskette in the diskette drive. If there is one, remove it and press any key to continue. If pressing any key does not work, press Ctrl, Alt, and Del to restart the computer.

## **The Windows® operating system is not working**

Once you are familiar with the desktop and used to the way the operating system responds to your work routine, you can easily detect if the operating system is not working correctly. For example:

- ❖ The operating system fails to start after the Starting Windows XP message appears.
- ❖ The operating system takes a long time to start.
- ❖ The operating system responds differently from the normal routine.
- ❖ The screen does not look right.

Unless a hardware device has failed, problems usually occur when you change the system in some way such as installing a new program or adding a device.

If you experience any of these problems, use the options in the Startup menu to fix the problem.

---

## Using Startup options to fix problems

If the operating system fails to start properly, you may have to change your system's configuration or verify the startup procedure to fix the problem. To do this, use the options in the Startup menu. This section describes each option and when to use the procedure.

To open the Startup menu:

- 1** Restart your computer.
- 2** Press F8 when your computer starts.

The Windows® Advanced Options menu displays these options:

- ❖ Safe Mode
- ❖ Safe Mode (with Networking)
- ❖ Safe Mode (with Command Prompt)
- ❖ Enable Boot Logging
- ❖ Enable VGA Mode
- ❖ Last known good configuration (your most recent settings that worked)
- ❖ Directory Services Restore Mode (Windows® domain controllers only)
- ❖ Debugging Mode
- ❖ Start Windows® normally
- ❖ Reboot
- ❖ Return to OS Choices (menu)

---

See your Windows® documentation for further explanation.

---

**TECHNICAL NOTE:** If your computer is connected to a network, the Startup menu may display different versions of Safe mode.

---

## **Internet problems**

### **My Internet connection is very slow.**

Many factors contribute to the speed with which you can surf the Internet. They include: modem speed, time of day (when everyone else is surfing, your access can be slow), and popularity of the site. If accessing a particular site is very slow, try later.

### **My browser cannot find the URL address I typed in.**

Make sure you separated the domain names of the address with the forward slash (/). Check the spelling of each name and the syntax of the address carefully. A single incorrect letter or missed character, comma instead of period (“dot”), or other mistake makes it impossible for your browser to locate the site.

### **My browser cannot find a site I bookmarked.**

The World Wide Web is constantly changing. A site you bookmarked yesterday may not be available today or its server may be down for temporary repair. Try again later.

## **The Windows® XP operating system can help you**

If the operating system has started properly, but you still have a problem using your computer, the online Help can assist you in troubleshooting the problem.

To access Windows® XP Help and Support:

- 1** Click **Start**, then click **Help and Support**.

---

The Help and Support window appears.

- 2 Then do one or both of the following:
  - ❖ In the search field, type the topic of the problem with which you need help and follow the on-screen instructions.
  - ❖ Click a problem about which you would like help from the listings and follow the on-screen instructions.

You can connect to Support Online by clicking **Support** from the menu.

## Resolving a hardware conflict

If you receive an error message telling you there is a device driver conflict or a general hardware problem, try using Windows® Help and Support to troubleshoot the problem first.

For help on hardware conflicts:

- 1 Click Start, then click **Help and Support**.
- 2 Click the **Hardware** link in the window's left pane.

A list of category links appear.
- 3 Click the **Fixing a hardware problem**.
- 4 Choose from specific topics and follow the steps.

If there is still a problem, the operating system should display a message that explains what the conflict is.

## A plan of action

The smooth operation of the system depends on the interaction of all devices, programs, and features. If the system or one of its attached devices is not working, resolving the problem can be time-consuming and frustrating.

The recommended procedure for getting multiple devices to work together is to add and set up one device at a time. After you add each device, test it to make sure it and all previously connected devices work.

The device most recently connected to the system is the one most likely to be causing a hardware conflict.

## **Resolving hardware conflicts on your own**

Computer components need resources to accomplish a task. A device, such as a disk drive or a modem, needs a channel to the computer's Central Processing Unit (CPU). It also needs a direct channel to the computer's memory to store information as it works. These channels of communication are commonly referred to as system resources.

### **Interrupt Request Channel**

The channel to the CPU is called an Interrupt Request (IRQ) because it interrupts what the processor is doing and requests some of the processor's time.

### **Direct Memory Access**

Similarly, the data required by the device is stored in a specific place or address in memory called the Direct Memory Access (DMA). The DMA provides a dedicated channel for adapter cards to bypass the microprocessor and access memory directly. If two or more devices use the same DMA, the data required by one device overwrites the data required by the other, causing a hardware conflict.

### **Plug and Play**

With Plug and Play and the Windows® XP operating system, avoiding hardware conflicts is easy. Plug and Play is a computer standard that helps the system BIOS (basic input/output system) and the operating system to automatically assign resources to Plug and Play-compliant devices. In theory, if every device connected to the computer is Plug and

---

Play-compliant, no two devices will compete for the same system resources. Simply plug in the device and turn on your computer. The operating system automatically sets up your system to accommodate the new device.

If you install an older (legacy) device that the operating system cannot recognize, the operating system may have difficulty assigning resources to it. As a result, a hardware conflict can occur. To see what resources the operating system has assigned to the device, see [“Checking device properties” on page 200](#).

## **Resolving conflicts**

There are three things you can do to resolve hardware conflicts:

- ❖ **Disable the device.**  
For an older device, remove it from the computer.
- ❖ **Disable another system component and use its resources for the new device,** see [“Fixing a problem with Device Manager” on page 199](#).
- ❖ **Reconfigure the device so that its requirements do not conflict.** Refer to the device’s documentation for instructions about changing settings on the device.

## **Fixing a problem with Device Manager**

Device Manager provides a way to check and change the configuration of a device.

---

**CAUTION**

Changing the default settings using Device Manager can cause other conflicts that make one or more devices unusable. Device Manager is a configuration tool for advanced users who understand configuration parameters and the ramifications of changing them.

---

## Disabling a device

- 1 Open the **Start** menu, click **Control Panel**, then **Performance and Maintenance**.
- 2 Click the **Administrative Tools** icon.
- 3 Click the **Computer Management** and then **Device Manager**.
- 4 Select the specific device from the device category.
- 5 In the toolbar, look to the far right for an icon of a monitor with a strike mark through a circle on the front. This is the disable feature.
- 6 Click the icon.  
You are given the option of disabling the device.
- 7 Click **yes** or **no**, whichever is appropriate.

## Checking device properties

Device Manager provides a way to view the properties of a device. Properties include the name of the manufacturer, the type of device, the drivers installed, and the system resources assigned to the device.

To check a device's properties:

- 1 Open the **Start** menu, then click **Control Panel**.
- 2 Click **Performance and Maintenance**, and then **Administrative Tools**.
- 3 Click the **Computer Management** icon.
- 4 Click the **Device Manager** button.
- 5 To view the device(s) installed, double-click the device type.
- 6 To view the properties, double-click the device.

The operating system displays the Device Properties dialog box, which provides an array of tabs. They include:

- ❖ The **General** tab, which provides basic information about the device.
- ❖ The **Resource** tab, which lists resources assigned to the monitor, DVD-ROM, multi-function drive, diskette disk drive, and other power-using functions.
- ❖ The **Drivers** tab, which displays the drivers being used by the device.

A Troubleshooting button is also present.

**7 Click **troubleshooting**.**

A Help and Support window for that device appears.

For more information about Device Manager, refer to Windows® XP online help.

## **Memory problems**

Incorrectly connected or faulty memory modules may cause errors that seem to be device-related. It is worthwhile checking for these first:

**1 Click **Start**, then click **Turn off computer**.**

**2 Click **Turn Off**.**

The operating system shuts down and turns off the computer automatically.

**3 Remove the memory module.**

**4 Reinstall the memory module, following the instructions in “[Adding memory](#)” on page 66, and making sure it is seated properly.**

**5 Check for the error again.**

**6 If the error recurs, remove the memory module entirely and check for the error again.**

If removing the memory module eliminates the error, the memory module may be faulty. If the error recurs without the

---

memory module installed, the error is not caused by the memory module.

---

TECHICAL NOTE: You must have at least one memory module installed for the computer to work.

---

## **Power and the batteries**

Your computer receives its power through the AC adapter and power cable or from the system batteries (main battery and real-time clock (RTC) battery). Power problems are interrelated. For example, a faulty AC adapter or power cable will neither power the computer nor recharge the batteries.

Here are some typical problems and how to solve them:

### **The AC power light does not come on when you plug in the AC adapter and power cable.**

Make sure the AC adapter and power cable are firmly plugged into both the wall outlet and the computer.

If the AC power light still does not come on, check that the wall outlet is working properly by plugging in a lamp or other appliance.

### **The AC adapter and power cable work correctly, but the battery will not charge.**

The battery does not charge while the computer is consuming full power. Try turning off the computer.

The main battery may not be inserted correctly in the computer. Turn off the computer, remove the battery, clean the contacts with a soft dry cloth (if necessary), and replace the battery.

The battery may be too hot or too cold to charge properly. If you think this is the probable cause, let the battery reach room temperature and try again.

---

If the battery has completely discharged, it will not begin charging immediately. Leave the AC adapter and power cable connected, wait 20 minutes and see if the battery is charging.

If the battery light is glowing after 20 minutes, let the computer continue charging the battery for at least another 20 minutes before you turn on the computer.

If the battery light does not glow after 20 minutes, the battery may have reached the end of its useful life. Try replacing it.

**The battery appears not to power the computer for as long as it usually does.**

If you frequently recharge a partially charged battery, it may not charge fully. Let the battery discharge completely, then try charging it again.

Check the power options using the Power Saver utility. Have you added a device, such as a PC Card or memory module, that takes its power from the battery? Is your software using the hard disk more? Is the display power set to turn off automatically? Was the battery fully charged to begin with? All these conditions affect how long the charge lasts.

**Keyboard problems**

If, when you type, strange things happen or nothing happens, the problem may be related to the keyboard itself.

**The keyboard produces unexpected characters.**

A keypad overlay may be on. If the numeric keypad or cursor control light is on, press Fn and F10 simultaneously to turn off the cursor control light or press Fn and F11 simultaneously to turn off the numeric keypad light.

If the problem occurs when both the keypad overlays are off, make sure the software you are using is not remapping the keyboard. Refer to the software's documentation and check that the program does not assign different meanings to any of the keys.

**You have connected an external keyboard and the operating system displays one or more keyboard error messages.**

If you have a second keyboard, try it. If it works, the first keyboard may be defective or incompatible with your computer.

## **Display problems**

Here are some typical display problems and their solutions:

**The display is blank.**

Display Auto Off may have gone into effect. Press any key to activate the screen.

You may have activated the instant password feature by pressing Fn and F1 simultaneously. If you have registered a password, press the Enter key, type the password, and press Enter. If no password is registered, press Enter. The screen reactivates and allows you to continue working.

If you are using the built-in screen, make sure the display priority is not set for an external monitor. To do this, hold the Fn key and press F5 twice. A window with display choices pops up. Hold the Fn key and press F5 twice again to advance through the display options.

If you are using an external monitor:

- ❖ Check that the monitor is turned on.
- ❖ Check that the monitor's power cable is firmly plugged into a working power outlet.
- ❖ Check that the cable connecting the external monitor to the computer is firmly attached.
- ❖ Try adjusting the contrast and brightness controls on the external monitor.
- ❖ Press Fn and F5 simultaneously to make sure the display priority is not set for the built-in screen.

---

### **The screen does not look right.**

You can change the display settings by clicking a blank area of the desktop with the secondary control button, then clicking **Properties**. This opens the Display Properties dialog box. The Appearance tab of this dialog box allows you to choose the colors for the screen. The Settings tab allows you to choose the screen resolution.

### **The built-in screen flickers.**

Some flickering is a normal result of the way the screen produces colors. To reduce the amount of flickering, try using fewer colors.

To change the number of colors displayed:

- 1** Point at the desktop and click with the secondary button.
- 2** Click **Properties**, and then the **Settings** tab.
- 3** Change the Colors option and click **OK**.

For more information, see Windows® Help.

### **A message tells you that there is a problem with your display settings and that the adapter type is incorrect or the current settings do not work with your hardware.**

Reduce the size of the color palette to one that is supported by the computer's internal display.

To change the display properties:

- 1** Point at the desktop and click with the secondary button.

The Display Properties window appears.

- 2** Click **Properties**, then click the **Settings** tab.
- 3** Adjust the screen resolution and/or color quality.
- 4** Click **OK**.

**The display mode is set to Simultaneous and the external display device does not work.**

Make sure the external monitor is capable of displaying at resolutions of 800 x 600 or higher. Devices that do not support this resolution will only work in Internal/External mode.

**Small bright dots appear on your TFT display when you turn on your computer.**

Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. The small bright dots that appear on your display are an intrinsic characteristic of the TFT manufacturing technology.

---

**NOTE**

Over a period of time, and depending on the usage of the computer, the brightness of the LCD Screen will deteriorate. This is an intrinsic characteristic of LCD technology.

Screen will dim when the computer is operated on battery power and you may not be able to increase the brightness of the screen.

---

## **Disk drive problems**

Problems with the hard disk or with a diskette drive usually show up as an inability to access the disk or as sector errors. Sometimes a disk problem may cause one or more files to appear to have garbage in them. Typical disk problems are:

**You are having trouble accessing a disk, or one or more files appear to be missing.**

Make sure you are identifying the drive by its correct name (A: or C:).

---

## Error-checking

Run Error-checking, which analyzes the directories, files, and File Allocation Table (FAT) on the disk and repairs any damage it finds:

To run Error-checking:

- 1 Click **Start**, then click **My Computer**.
- 2 Right-click the drive you want to check and select **Properties** from the menu.

The drive's properties box appears.

- 3 Click the **Tools** tab.
- 4 Click the **Check now** button.

The Check Disk All Apps box appears.

- 5 You can choose one or both options:
  - ❖ Automatically fix file system errors
  - ❖ Scan for and attempt recovery of bad sectors

- 6 Click **Start**.

Error-checking runs the test.

### **Your hard disk seems very slow.**

If you have been using your computer for some time, your files may have become fragmented. Run Disk Defragmenter. To do this, click **Start**, then click **All Programs**, point to **Accessories** and **System Tools**, and click **Disk Defragmenter**.

### **Your data files are damaged or corrupted.**

Refer to your software documentation for file recovery procedures. Many software packages automatically create backup files.

You may also be able to recover lost data using utility software, which is available from your dealer.

**Some programs run correctly but others do not.**

This is probably a configuration problem. If a program does not run properly, refer to its documentation and check that the hardware configuration meets its needs.

**A diskette will not go into the external diskette drive.**

You may already have a diskette in the drive. Make sure the drive is empty.

You may be inserting the diskette incorrectly. Hold the diskette with the hub side facing down, and insert it so that the metal head window cover goes into the drive first.

The metal cover or a loose label may be obstructing the path into the drive. Carefully inspect the diskette. If the metal cover is loose, replace the diskette. If the label is loose, replace the label and try inserting the diskette again.

**The computer displays the Non-system disk or disk error message.**

If you are starting the computer from a diskette, the diskette in the drive does not have the files necessary to start the computer. Replace it with a bootable diskette.

**The drive cannot read a diskette.**

Try another diskette. If you can access the second diskette, the first diskette (not the drive) is probably causing the problem. Run Error-checking on the faulty diskette (for instructions, see [“Disk drive problems” on page 206](#)).

**DVD-ROM or multi-function drive problems****You cannot access a disc in the drive.**

Make sure the drive tray has closed properly. Press gently until it clicks into place.

Open the drive tray and remove the disc. Make sure the drive tray is clean. Any dirt or foreign object can interfere with the laser beam.

Examine the disc to see whether it is dirty. If necessary, wipe it with a clean damp cloth dipped in water or a neutral cleaner.

Replace the disc in the tray. Make sure it is lying flat, label side uppermost. Press the disc down until it locks on the spindle. Close the drive tray carefully, making sure it has shut completely.

**You press the disc eject button, but the drive tray does not slide out.**

Make sure the computer is connected to a power source and turned on. The DVD-ROM or multi-function drive eject mechanism requires power to operate.

To remove a disc without turning on the computer, use a narrow object, such as a straightened paper clip, to press the manual eject button. This button is in the small hole next to the disc eject button on the right side of the computer.

**Some discs run correctly, but others do not.**

If the problem is with an application CD-ROM, refer to the software's documentation and check that the hardware configuration meets the program's needs.

## **Sound system problems**

**You do not hear any sound from the computer.**

Adjust the volume control.

If you are using external headphones or speakers, check that they are securely connected to your computer.

**The computer emits a loud, high-pitched noise.**

This is feedback between the microphone and the speakers. It occurs in any sound system when input from a microphone is fed to the speakers and the speaker volume is too loud. Adjust the volume control.

Changing the settings for the Record Monitor feature in the Recording Control Utility (default Off), or the Mute feature

in the Mixer Utility (default Enabled), may cause feedback. Revert to the default settings.

## **PC Card problems**

PC Cards (PCMCIA-compatible) include many types of devices, such as a removable hard disk, additional memory, or a pager.

Most PC Card problems occur during installation and setup of new cards. If you are having trouble getting one or more of these devices to work together, several sections in this chapter may apply.

Resource conflicts can cause problems when using PC Cards. See [“Inserting and removing PC Cards” on page 81](#) for more information.

## **Card Information Structure**

When you insert a PC Card into a slot, the computer attempts to determine the type of card and the resources it requires by reading its Card Information Structure (CIS). Sometimes the CIS contains enough information for you to use the card immediately.

Other cards must be set up before you can use them. Use the Windows® XP PC Card (PCMCIA) Wizard to set up the card. Refer to your Microsoft® documentation for more information, or refer to the documentation that came with the PC Card.

Some card manufacturers use special software called *enablers* to support their cards. Enablers result in nonstandard configurations that can cause problems when installing the PC Card.

If your system does not have built-in drivers for your PC Card and the card did not come with an operating system driver, it may not work under the operating system. Contact the manufacturer of the PC Card for information about using the card under the operating system.

---

## PC Card checklist

- ❖ Make sure the card is inserted properly into the slot.  
See “[Inserting and removing PC Cards](#)” on page 81 for information about how to insert PC Cards.
- ❖ Make sure all cables are securely connected.
- ❖ Occasionally a defective PC Card slips through quality control. If another PCMCIA-equipped computer is available, try the card in that machine. If the card malfunctions again, it may be defective.

## Resolving PC Card problems

Here are some common problems and their solutions:

### **The slots appear to be dead. PC Cards that used to work no longer work.**

Check the PC Card status:

- 1 Click **Start**.
- 2 Click **My Computer** icon with the secondary button, then click **Properties**.

The System Properties dialog box appears.

- 3 Click the **Hardware** tab.
- 4 Click the **Device Manager** button.
- 5 Double-click the **PCMCIA adapter**.
- 6 Double-click the appropriate PC Card.

The operating system displays your PC Card's Properties dialog box, which contains information about your PC Card configuration and status.

### **The computer stops working (hangs) when you insert a PC Card.**

The problem may be caused by an I/O (input/output) conflict between the PCMCIA socket and another device in the system. Use Device Manager to make sure each device has its own I/O base address. See [“Fixing a problem with Device Manager” on page 199](#) for more information.

Since all PC Cards share the same socket, each card is not required to have its own address.

### **Hot swapping (removing one PC Card and inserting another without turning the computer off) fails.**

Follow this procedure before you remove a PC Card:

- 1 Double-click the **PC Card** icon on the taskbar.
- 2 Click **Safely remove xxxx**, where *xxxx* is the identifier for your PC Card.

The operating system displays a message that you may safely remove the card.

- 3 Remove the card from the slot.

---

#### **CAUTION**

Never swap modules when the computer is in Hibernation or Standby mode. This is known as “warm swapping” and is not supported with this computer. For more information on Hibernation and Standby modes, see [“Using Hibernation” on page 115](#) and [“Using Standby” on page 117](#).

---

### **The system does not recognize your PC Card.**

Refer to the PC Card documentation.

Removing a malfunctioning card and reinstalling it can correct many problems.

### **A PC Card error occurs.**

Reinsert the card to make sure it is properly connected.

---

If the card is attached to an external device, check that the connection is secure.

Refer to the card's documentation, which should contain a troubleshooting section.

## **Printer problems**

This section lists some of the most common printer problems:

### **The printer will not print.**

Check that the printer is connected to a working power outlet, turned on, and ready (online).

Check that the printer has plenty of paper. Some printers will not start printing when there are just two or three sheets of paper left in the tray.

Make sure the printer cable is firmly attached to the computer and the printer.

Run the printer's self-test to check for any problem with the printer itself.

Make sure you installed the proper printer drivers, as shown in ["Connecting a local printer" on page 61](#).

You may have connected the printer while the computer is on. Disable Stand By mode, turn off the computer, and turn off the printer. Turn the printer back on, make sure it is on line, then turn the computer back on.

Try printing another file. For example, you could create and attempt to print a short test file using Notepad. If a Notepad file prints correctly, the problem may be in your original file.

If you cannot resolve the problem, contact the printer's manufacturer.

### **The printer will not print what you see on the screen.**

Many programs display information on the screen differently from the way they print it. See if your program has a print preview mode. This mode lets you see your work exactly as it

will print. Contact the software manufacturer for more information.

## Modem problems

This section lists common modem problems:

### **The modem will not receive or transmit properly.**

Make sure the cable from the modem to the telephone line is firmly connected to the computer's modem port and the telephone line jack.

Check the port settings to make sure the hardware and software are referring to the same COM port.

Check the communications parameters (baud rate, parity, data length and stop bits) specified in the communications program. It should be set up to transmit at 300, 1200, 2400, 4800, 9600, 14400, 28800, 33600 bps (bits per second), or higher. Refer to the program's documentation and the modem manual for information on how to change these settings.

### **The modem is on, set up properly and still will not transmit or receive data.**

Make sure the line has a dial tone. Connect a telephone handset to the line to check this.

The other system may be busy or off line. Try making a test transmission to someone else.

## Develop good computing habits

Make sure you are prepared.

### **Save your work frequently.**

You can never predict when your computer will lock, forcing you to close a program and lose unsaved changes. Many software programs build in an automatic backup, but you should not rely solely on this feature. Save your work! See [“Computing tips” on page 87](#) for instructions.

---

**On a regular basis, back up the information stored on your hard disk.**

Here are some ways you can do this:

- ❖ Copy files to diskette, following the steps in “[Saving your work](#)” on page 99.
- ❖ Connect a tape drive to the system and use specialized software to copy everything on the hard disk to a tape.

Some people use a combination of these methods, backing up all files to tape weekly and copying critical files to diskette on a daily basis.

If you have installed your own programs, you should back up these programs as well as your data files. If something goes wrong that requires you to reformat your hard disk and start again, reloading all your programs and data files from a backup source will save time.

**Read the user’s guides.**

It is very difficult to provide a fail-safe set of steps you can follow every time you experience a problem with the computer. Your ability to solve problems will improve as you learn about how the computer and its software work together.

Get familiar with all the user’s guides provided with your computer, as well as the manuals that come with the programs and devices you purchase.

Your local computer store or book store sells a variety of self-help books you can use to supplement the information in the manuals.

**If you need further assistance**

If you have followed the recommendations in this chapter and are still having problems, you may need additional technical assistance. This section contains the steps to take to ask for help.

### Before you call

Since some problems may be related to the operating system or the program you are using, it is important to investigate other sources of assistance first.

Try the following before contacting Toshiba:

- ❖ Review the troubleshooting information in your operating system documentation.
- ❖ If the problem occurs while you are running a program, consult the program's documentation for troubleshooting suggestions. Contact the software company's technical support group for their assistance.
- ❖ Consult the dealer from whom you purchased your computer and/or program. Your dealer is your best source for current information.

Detailed system specifications are available at [www.ts.toshiba.com](http://www.ts.toshiba.com) by selecting your particular product and model number, clicking **GO**, and then clicking the **Detailed Specs** link from the menu on the left, or just refer to the computer documentation shipped with your product.

For the number of a Toshiba dealer near you in the United States, call: (800) 457-7777.

### Contacting Toshiba

If you still need help and suspect that the problem is hardware-related, Toshiba offers a variety of resources to help you.

To stay current on the most recent software and hardware options for your computer, and for other product information, be sure to regularly check the Toshiba Web site at [pcsupport.toshiba.com](http://pcsupport.toshiba.com).

## Using ConfigFree™ with your Toshiba Computer

---

ConfigFree™ is a set of utilities that makes it easy to control communication devices and network connections. ConfigFree also lets you identify communication problems and create profiles for easy switching between locations and communication networks.

The ConfigFree utilities include the following:

- ❖ **Connectivity Doctor**—The Connectivity Doctor utility is used to analyze network connections and fix networking problems with your notebook computer. For more information, see [“Connectivity Doctor” on page 230](#).
- ❖ **Search for Wireless Devices**—The Search for Wireless Devices utility searches for wireless LAN and Bluetooth devices used in the neighborhood, and displays information about them on a virtual map. For more information, see [“Search for Wireless Devices” on page 233](#).
- ❖ **Profile Settings**—The Profiles utility lets you switch between network configurations. For more information, see [“Profile Settings” on page 235](#).

---

## Getting Started

This section contains information about the ConfigFree main screen, and how to start and setup ConfigFree.

For more detailed information on setting up and using ConfigFree, see the Help File included in the application.

### Starting ConfigFree

To start ConfigFree, be sure the computer has a wired or wireless connection. Then perform any of the following steps:

- ❖ (Microsoft® Windows® XP or 2000) Click the **Start** button, and select **All Programs, TOSHIBA, Networking, ConfigFree**.
- ❖ Double-click the **ConfigFree** icon  on the taskbar.
- ❖ Press the **Toshiba Console** button (if applicable to your system) to open the Toshiba Console, and then click the **ConfigFree** icon.
- ❖ Click the **ConfigFree** icon  on the taskbar, and then click the desired utility.

---

#### NOTE

If your computer is not connected to a network, the ConfigFree icon on the taskbar is displayed with an "X."

---

When you start a search for wireless devices, ConfigFree Launcher displays on your computer desktop. You can then click the appropriate icon on the Launcher to start the desired ConfigFree utilities.

*Sample ConfigFree Launcher*

## ConfigFree Utilities

### Connectivity Doctor

The Connectivity Doctor lets you analyze your network connections and fix network-connection problems. Using Connectivity Doctor, you can view detailed network information by simply moving the mouse pointer.

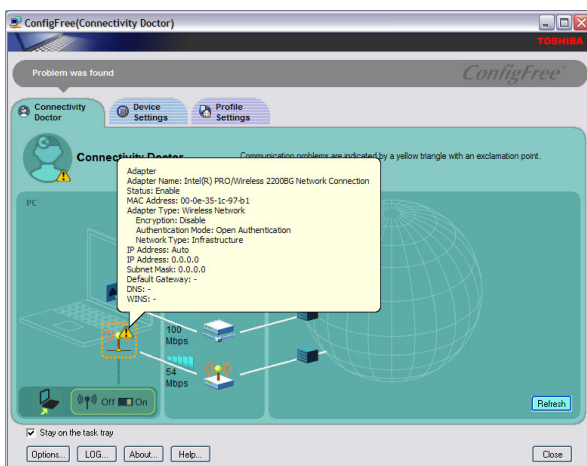

The Connectivity Doctor works with the following network devices:

- ❖ Wired and wireless network devices
- ❖ Routers, hubs, and bridges
- ❖ Access points

### *Sample Connectivity Doctor screen*

Moving the mouse pointer over a wired or wireless network device icon displays information about the device, such as its IP address, subnet mask, and MAC address. A wireless network device also shows information such as the network SSID and the device's Wired Equivalent Privacy (WEP) key settings.

### *Sample viewing device information*

If a problem, or potential problem, is detected, a triangle containing an exclamation point appears in the Connectivity Doctor screen and an orange frame describes the relevant location. You can then view a possible cause and solution for the problem by clicking the exclamation point.

For example, if the connection to a wireless network cannot be established because the wireless communication switch is turned off, an exclamation point appears next to the wireless communication switch. Clicking the exclamation point displays a description of the problem and a solution.

The following checkboxes and buttons are provided on the Connectivity Doctor screen:

|                              |   |
|------------------------------|---|
| <b>Stay on the task tray</b> | When checked, the ConfigFree icon resides in the system tray.   |
| <b>Options</b>               | Displays ConfigFree setting screen.   |
| <b>Log</b>                   | Lets you create a diagnostic log, view a history of log files, or delete the history. Log files are saved as CFhtmlxxxxx.htm, where xxxxx is the creation date and time. They reside in the folder:<br>C:\Documents and Settings\username\Local Settings\Temp |
| <b>About</b>                 | Displays the version of Connectivity Doctor.  |
| <b>Help</b>                  | Displays online help.   |
| <b>Close</b>                 | Closes the Connectivity Doctor screen.  |

---

## Search for Wireless Devices

The Search for Wireless Devices utility searches for wireless LAN devices and Bluetooth devices currently used in the neighborhood, and displays information about them on a virtual map.

To search for wireless devices:

- 1 Click the  icon in the system tray.
- 2 Click **Search for Wireless Devices**.

A virtual map appears with a graphical representation of the wireless devices that have been detected.

---

### NOTE

Search for Wireless Devices can also be started from the ConfigFree Launcher.

---

For Wi-Fi networks, the intensity of a signal is displayed in five levels or “bands.” The signal from the connected access point is displayed in the bands surrounding the PC icon at the center of the map. Placing the pointer over the displayed “point of light” shows detailed information about the wireless device.

---

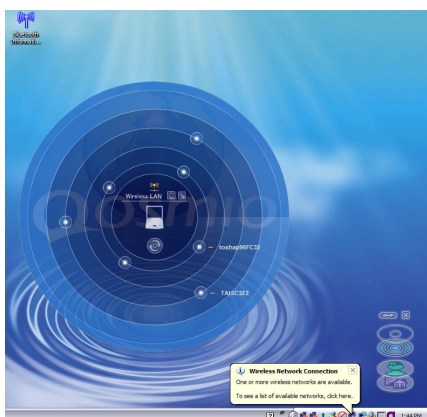

### NOTE

The wireless device shown near the center of the map is not necessarily near your notebook computer. If a wireless device located a distance away also has a strong signal, it appears near the center of the map as well.

# 234 Using ConfigFree™ with your Toshiba Computer

## ConfigFree Utilities

*Sample viewing Wi-Fi devices*

The following screen shows an example of Bluetooth devices that are detected. As with the Wi-Fi screen, moving the mouse pointer over a device icon displays information about the device.

*Sample viewing Bluetooth devices*

You can connect to devices shown on the Bluetooth map:

- 1 Click the icon of a Bluetooth device.

- 2 Click your own computer at the center of the map.
- 3 Configured devices are automatically connected. Devices not yet configured launch the Add New Connection Wizard, where you can configure and connect to the device.

## Profile Settings

The Profile Settings utility lets you save network settings in “profiles.” ConfigFree profiles are useful for easily switching network settings and devices. You can switch network settings simply by selecting the profile with the desired settings.

If you visit a client company occasionally, for example, you can set up a profile to match that environment and connect to the network. Similarly, users who access networks in the office and at home can set up profiles to handle these networking environments.

A profile contains the currently configured network settings on the computer, as well as information about any network devices. The following settings can be saved (or “captured”) in a profile:

- ❖ **Internet settings** — includes LAN settings (proxy server settings) and the address of a home page that opens automatically when Internet Explorer starts.
- ❖ **Devices** — lets you enable or disable settings of wired and wireless network devices, infrared devices, and set the power status of Bluetooth antennas.
- ❖ **TCP/IP settings** — includes DHCP, IP address, subnet mask, default gateway, DNS server, and WINS server settings.

- ❖ Personal firewall settings for Internet connections.
- ❖ Dial-up connection settings for the default connection.
- ❖ File and printer sharing settings.
- ❖ Printer settings for the default printer.

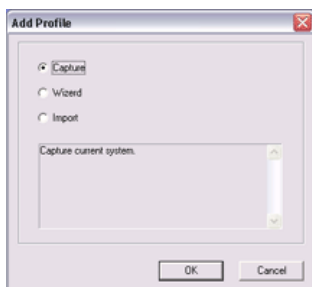

To create a profile:

- 1 Click the  icon in the system tray.
- 2 Move the pointer to **Profile**.
- 3 Click **Add**. The Add Profile screen appears.
- 4 Select **Capture** and click **OK**. The Add Profile screen appears.
- 5 Enter the name of the profile you want to create.
- 6 Enter any optional comments, if desired.
- 7 Click **Change Icon** and select an icon for this profile.
- 8 Under **Captured Items**, select the items you want to capture for this profile.
- 9 If connecting with a wireless network, select the desired **Auto Switch Settings**. (These options are unavailable if wireless devices have been disabled.)
- 10 Under **Execute this program after switching**, click the **Browse** button and select the program, file, or Web site URL that is to start after switching to this profile.

For example to have Internet Explorer start in Windows XP after switching profiles, type:

C:\Program Files\Internet Explorer\IEXPLORE.EXE

- 11 Click **OK**.

*Sample Add Profile screen*

---

**NOTE**

The online help provides real-world examples of setting up profiles for different networking environments.

---

After you set up one or more profiles, you can check their settings and fine-tune them as necessary. Profiles can also be imported and exported. This feature is useful when transferring profile settings to other computers. For more information about modifying, importing, and exporting profiles, refer to the online help.

## Quick Connect

The Quick Connect feature switches the Wireless LAN connection to connect to a Toshiba Wireless Projector. Once the projector utility is installed, launching the Quick Connect utility automatically opens the Wireless Data Projector Application. There you can configure how you would like to use the projector.

To connect to a Toshiba Wireless Projector:

- 1 Click the  icon in the system tray.
- 2 Move the mouse pointer to **Toshiba Wireless Projector (DPJ)**, then click **Connect**.

Launching Quick Connect prevents you from using the network to connect to a Toshiba Wireless Projector when the wireless LAN Configuration is set to Ad hoc. If you are connected to an access point, the connection is broken and re-established later.

To review the current Toshiba Wireless Projector settings and change them if necessary:

- 1 Click the  icon in the system tray.
- 2 Move the mouse pointer to **Toshiba Wireless Projector (DPJ)**, then click **Settings**. The Quick Connect properties dialog box appears.
- 3 Complete the settings. Refer to the online help if necessary.
- 4 Click **OK**.

---

**NOTE**

The default connection setting is for Ad hoc mode, therefore, if the setting on the Toshiba Wireless Projector is in Infrastructure mode, it will not connect, however; you can change the settings to Infrastructure mode to match the settings on the projector.

---

*Sample Projector icon when connected with Quick Connect*

If the wireless mode for the wireless setting is set for 5 GHz (802.11a), Quick Connect changes this mode to 2.4 GHz (802.11b) and then connects to the projector.

The wireless LAN configuration returns to the settings that were last used before the Quick Connect function was started:

- ❖ If the Toshiba Wireless Projector utility is closed.
- ❖ If you select Toshiba Wireless Projector (DPJ) from the ConfigFree tray menu (this disconnects the wireless LAN connection).
- ❖ If you select a profile from the ConfigFree tray menu or when you disable a wireless device.
- ❖ If you close ConfigFree.

## Using the Automatic Switch

The Automatic Switch feature allows the computer to automatically switch profiles the next time it is powered on. This feature is particularly useful if you want your computer to automatically switch from the network configuration you use in your office to the one you use at home.

The Auto Switch feature contains options for automatically switching between wired and wireless devices. With these options, the computer automatically switches to a wireless LAN network when the cable of the wired LAN network is removed from the computer. When the cable is reconnected, the connection to the wired LAN is re-established.

To use the Automatic Switch feature:

- 1 Right-click the  icon in the system tray.
- 2 Click **Auto Switch**. The Auto Switch dialog box appears.
- 3 Check **Enable Wireless when cable disconnect occurs**.
- 4 Click **OK**.

---

### NOTE

If your computer is connected to multiple wireless LAN devices, the Auto Switch (SSID) feature is disabled. To enable this feature, only one wireless LAN device can be used.

---

---

## Semi-Automatic Switch Feature

The Semi-Automatic feature alerts you when the computer connects to a Service Set Identifier (SSID) stored in a profile. When the computer connects to the designated SSID, a notification window appears. You can then click this window to connect using the settings specified in the profile.

To use the Semi-Automatic Switch feature:

- 1 Right-click the  icon in the system tray.
- 2 Click **Auto Switch**. The Auto Switch dialog box appears.
- 3 Select the **Auto Switch (SSID)** tab.
- 4 Select the profile to be automatically selected when the SSID is detected, then click **Add**. The profile is moved to the **List of target SSIDs and profiles**.
- 5 Repeat the previous step for each additional profile you want to select.
- 6 Select **Automatically switch profiles when connected to this SSID**.
- 7 Check **Automatically switch profile when connected to this SSID**.
- 8 Click **OK**.

The computer is now configured to use the Semi-Automatic Switch feature. When the computer connects to an SSID in a profile, a display notification window appears. You can then click **Switch** on the window to switch profiles. You can also set the option for having the switch be automatic without the need for a notification.

---

### NOTE

Several profiles can be defined for a single SSID. In this case, several notification windows are displayed. By clicking these windows, you can switch to the profile for that location.

## Terms

The following terms may appear in this user's guide.

### A

**active-matrix display**—A liquid crystal display (LCD) made from an array of liquid crystal cells using active-matrix technology. Also known as a “TFT display,” in its simplest form there is one thin film transistor (TFT) for each cell. This type of display works well with notebook computers because of its shallow depth and high-quality color. Active-matrix displays are viewable from wider angles than most passive-matrix displays.

**adapter**—A device that provides a compatible connection between two units. For example, the computer's internal display adapter receives information from the software and translates it into images on the screen. An adapter can take a number of forms, from a microprocessor to a simple connector. An intelligent adapter (one that is capable of doing some processing) may also be called a controller.

**alternating current (AC)**—The type of power usually supplied to residential and commercial wall outlets. AC reverses its direction at regular intervals. Compare *direct current (DC)*.

**application**—A computer program that you use to perform tasks of a specific type. Applications include word processors, spreadsheets, and database management systems. See also *program*.

**B**

**backup**—A copy of a file, usually on a removable disk, kept in case the original file is lost or damaged.

**basic input/output system (BIOS)**—See *BIOS*.

**baud rate**—The speed at which a communication device, such as a printer or modem, transmits information. Baud rate is the number of signal changes per second (not necessarily the same as bits per second). See also *bits per second*.

**BIOS (basic input/output system)**—Basic instructions, stored in read-only memory (ROM), containing the information the computer needs in order to check hardware and load the operating system when you start up the computer.

**bit**—Short for “binary digit.” A bit is the smallest unit of information used by a computer. A group of eight bits is a byte. See also *byte*.

**bits per second (bps)**—A way of measuring the speed at which information is passed between two devices. The basic measure used in modem communications, bps is similar, but not identical, to the baud rate. See also *baud rate*.

**boot**—To start the computer. This term originates from the bootstrap program (as in “pulling itself up by its bootstraps”), a program that loads and initializes the operating system. See also *reboot*.

**boot disk**—See *system disk*.

**boot priority (startup sequence)**—The order in which the computer accesses its disk drives to locate the startup files. Under the default startup sequence, the computer looks for the startup files in the diskette drive before checking the hard disk.

**bus**—An electrical circuit that connects the central processing unit (CPU) with other parts of the computer, such as the video adapter, disk drives, and ports. It is the pathway through which data flows from one device to another. See also *bus speed*, *frontside bus*.

**bus speed**—The speed at which the central processing unit (CPU) communicates with the other parts of the computer.

**byte**—A sequence of eight bits. A byte is the smallest addressable unit of data. See also *bit*, *gigabyte*, *kilobyte*, *megabyte*.

**C**

**cache**—A section of very fast memory in which frequently used information is duplicated for quick access. Accessing data from cache is faster than accessing it from the computer's main memory. See also *CPU cache*, *L1 cache*, *L2 cache*.

**CD**—An individual compact disc. See also *CD-ROM*.

**CD-ROM (compact disc read-only memory)**—A form of high-capacity storage that uses laser optics instead of magnetic means for reading data. See also *CD*. Compare *DVD-ROM*.

**central processing unit (CPU)**—The chip that functions as the “brain” of the computer. It takes information from outside sources, such as memory or keyboard input, processes the information, and sends the results to another device that uses the information.

**character**—Any letter, number, or symbol you can use on the computer. Some characters are non-printing characters, such as a paragraph break in a word-processing program. A character occupies one byte of computer storage.

**chip**—A small piece of silicon containing computer logic and circuits for processing, memory, input/output, and/or control functions. Chips are mounted on printed circuit boards.

**click**—To press and release the mouse button without moving the mouse. In Windows, this refers to the left mouse button, unless otherwise stated. See also *double-click*.

**color palette**—A set of specified colors that establishes the colors that can be displayed on the screen at a particular time.

**compatibility**—The extent to which computers, programs, or devices can work together harmoniously, using the same commands, formats, or language as another.

**configuration**—(1) The collection of components that make up a single computer system. (2) How parts of the system are set up (that is, configured).

**controller**—A device that controls the transfer of data from a computer to a peripheral device and vice versa. For example, disk drives, monitors, keyboards, and printers all require controllers.

**CPU**—See *central processing unit (CPU)*.

**CPU cache**—A section of very fast memory residing between the CPU and the computer's main memory that temporarily stores data and instructions the CPU will need to execute commands and programs. See also *cache*, *L1 cache*, *L2 cache*.

**cursor**—A symbol that indicates the current position on the screen. The shape of the cursor varies, depending on the program you are using and what you are doing.

## D

**default**—The setting selected by a program when the user does not specify an alternative setting.

**device**—A component attached to the computer. Devices may be external (outside the computer's case) or internal (inside the computer's case). Printers, disk drives, and modems are examples of devices.

**device driver**—A program (called a “driver”) that permits a computer to communicate with a device.

**dialog box**—An on-screen window displayed by the operating system or a program giving a direction or requesting input from the user.

**direct current (DC)**—The type of power usually supplied by batteries. DC flows in one direction. Compare *alternating current (AC)*.

**direct memory access (DMA)**—A dedicated channel, bypassing the CPU, that enables direct data transfer between memory and a device.

**directory**—See *folder*.

**disable**—To turn a computer option off. See also *enable*.

**disc**—A round, flat piece of metal, designed to be read from and written to by optical (laser) technology, and used in the production of optical discs, such as CDs and DVDs. Compare *disk*.

**disk**—A round, flat piece of material that can be magnetically influenced to hold information in digital form, and used in the production of magnetic disks, such as diskettes and hard disks. Compare *disc*. See also *diskette*, *hard disk*.

**disk drive**—The device that reads and writes information and programs on a diskette or hard disk. It rotates the disk at high speed past one or more read/write heads.

**diskette**—A thin, flexible disk in a protective jacket that stores magnetically encoded data. Diskettes can be removed from the computer and come in two sizes: 5.25-inch and 3.5-inch. Your computer uses 3.5-inch diskettes. See also *double-density diskette*, *high-density diskette*.
